Sustainability report
2022

At a glance

Sustainability at Loacker

The Loacker Sustainability Strategy is based on our corporate enshrined in the mission and vision statements, the genetic code and in our business policies. Our quality and sustainability policy firmly establishes sustainable management along the entire value chain. We maintain a balance between environmental, economic and social responsibility.

Environmental protection and responsible use of resources

We avoid negative environmental effects as much as possible and make the manufacturing process extremely resource-efficient. Our production sites are reviewed annually in accordance with the international environmental management standard ISO 14001. The electricity we use is 100% green. Between 2019 and 2021 we were able to save approximately 1.7 mio. liters of heating oil which corresponds to approximately 5.600 tons of CO₂.

Product quality with responsibility

We place the highest demands on our product quality, which we systematically monitor from the outset in accordance with international standards. Loacker products are certified to the international Food Standard. Thereby we guarantee the highest possible product safety. Our raw materials are natural and unadulterated, are carefully processed and we strive to buy regional products. We maintain fair and long-term partnerships with our suppliers.

Commitment to employees and society

Our employees are crucial to the positive development of our company. We support the professional and personal development of our employees on many levels, treat each other with respect and appreciation and see diversity as an enrichment. As a family-owned business we are fully committed to the places where our company sites are located and get involved in the local social and cultural life.

81 About this report

- 82 GRI indicators

Dear Readers,

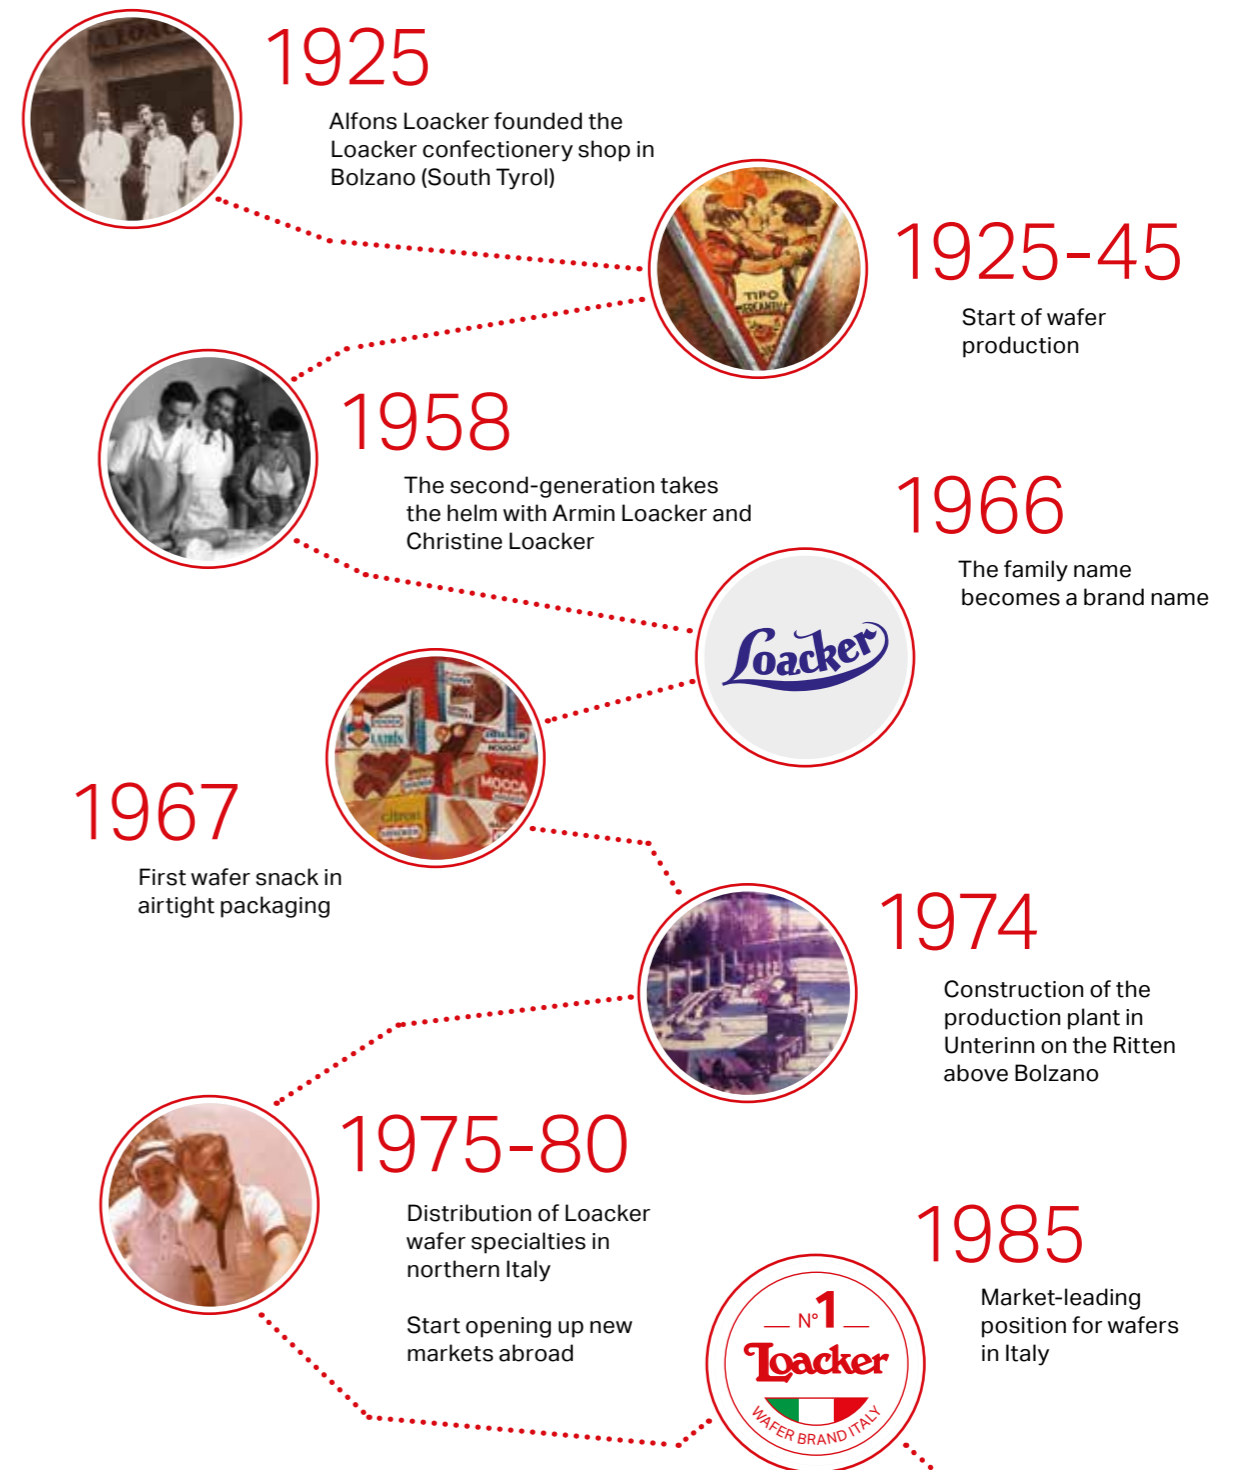

in over 90 years of corporate history, we have grown from a small pastry shop in Bolzano (South Tyrol) to an international brand and company that exports its high-quality wafers and chocolate specialties to over one hundred countries. We have remained a family-run business that continues to hold the same values. Fair cooperation, responsibility and respect for the environment, highest product quality, careful use of resources, as well as deciding and acting independently, are vital for us. Well before concepts such as energy efficiency and resource savings established themselves, we were recycling the waste heat from our ovens at our first production site as early as the 1970s to use it elsewhere. And long-term, cooperative and respectful relationships were always more important to us than mere economic success. Nowadays, our pursuit of sustainability is no longer just an informal affair, but it is officially enshrined in the Mission and Vision, the Mission Statement and in the various business policies of our

company. In order to guarantee the environmentally friendly production of our high-quality products we have introduced an integrated management system that systematically monitors and checks, among other things, quality, environmental protection and occupational safety. Our aim is to combine sustainable activity with corporate responsibility in a meaningful way. We want to guarantee our high product quality, while at the same time take on environmental and social responsibility and ensure the long-term existence of our family business through controlled growth. We want to and must strike a balance between these demands. Especially the procurement of high-quality raw materials, the efficient use of resources and the development of our employees are priorities for our current and future activities. Sustainable corporate management is always a medium-to long-term process continuously faced with new challenges, but it also offers us many opportunities for development. As a traditional family business, we are particularly

keen to hand down to the next generation an environment that is healthy and worth living in and a business that has a future. In this Locker Sustainability Report, we provide transparent insight to our thoughts and actions, as well as to our products and their production. We explain how we interact with our partners, employees and our social environment. We show what measures we have taken to protect the environment and in what areas we want to implement further measures. We cordially invite you to accompany us on this journey.

The Locker family and the Zuenelli family

The history of the family-owned Locker company

1996

Implementation of ISO 9001 Quality Management System

The family tradition was handed over to Alfons grandchildren Ulrich, Andreas and Martin

1999

Construction of plant in Heinfels/East Tyrol (Austria)

2001

Implementation of ISO 14001 Environmental Management System

2003

Candy Kettle Award Confectionery Oscar awarded to Armin Locker

2007

Sweets Global Award
Expansion of the production facilities (upper floors) in Heinfels
Opening of the first Locker Café

2010

Opening of the Locker World of Goodness in Heinfels
Plant expansion at the production site in Unterinn/South Tyrol
Christine Zuenelli-Locker receives the merit award of the province of Tyrol „Great Order of the Tyrolean Eagle in Gold“

2011

Completion of the plant expansion in Unterinn
South Tyrol Export Category Award
Implementation of the Integrated Management System IMS

2012

Locker Rose of the Dolomites launched on the market
Award "Sapore dell'anno" for Locker Classic wafers

2021 worldwide relaunch of the Locker brand and products with the new logo, new recipes and the "More than good" campaign

Founding of "Immobiliare Nocciolo Capranica GmbH", a hazelnut-processing real estate cooperative (?)

"Sweetie Award" for "Tortina Caramel"

2022

"Sweetie Award" for Locker "Classic Peanut Butter"

Second place in the "Food&Beverage Sustainability Italian Benchmark" ranking by Standard Ethics

2019

Inauguration of "Dolomites Milk", the first milk drying plant in South Tyrol

2020

"Sweetie Award" for "Classic Peanut Butter"

Second place in the "Food&Beverage Sustainability Italian Benchmark" ranking by Standard Ethics

2018

Award "Product of the year" Locker chocolate bars

2017

Award "Product of the year" Locker Cacao & Milk

2016

Locker becomes nr. 1 wafer producer worldwide

"Sweetie Award" for Locker Gran Pasticceria

Randstad Award as the most attractive employer in North-East Italy

2015

Presentation of the Randstad Award Italy, Northeast Region for "most attractive employer"

2014

Opening of the Pastry Workshop in the Heinfels World of Goodness

The Locker chocolate bar is launched on the market

Award "Sapore dell'anno" for Locker Classic wafers

2013

Opening of the first Locker BrandStore franchise in Trieste

Development of a systematic sustainability strategy

Award "Sapore dell'anno" for chocolate snack bars Choco&

„We are convinced that high-quality products and services, as well as environmental protection and compliance with social and ethical principles and economic success are goals that should never conflict with one another, be it today or in future generations. They are important components towards ensuring the independence and long-term existence of the company. Sustainability means maintaining a holistic balance between core business issues, like quality and economic success, and social, ethical and environmental responsibility. In this sense, sustainability is understood as a justification as well as the driving and defining force behind the healthy growth of our company. „

(Excerpt from the Loacker quality and sustainability policy)

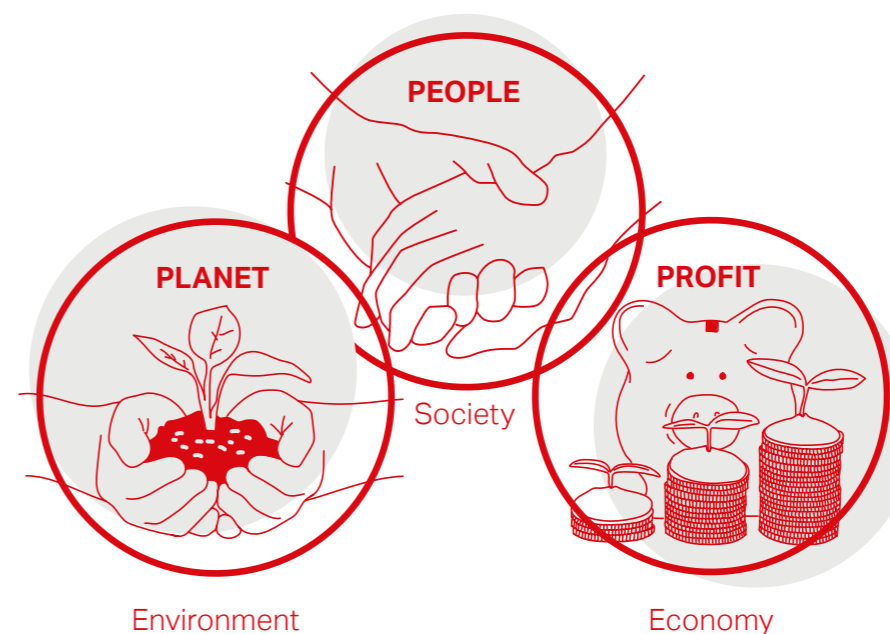

Sustainability within the Company

Environment, economy, society: the big picture

Thinking and acting sustainably has always been self-explanatory to the Loacker family - efficient use of resources, environmental responsibility and respect for employee welfare. Respect for the environment, high product quality and fair management are among the most fundamental beliefs of the family. So as early as the 1970s, soon after the opening of the plant in Unterinn, the waste heat of the ovens was reused, at a time when energy efficiency and sustainability were still alien concepts. A shuttle service and a cafeteria were set up for employees. The cafeteria made use of the vegetables grown in the garden in front of the production site.

New strategies for new challenges

Now more than ever, sustainable business is indispensable. Globalised markets, the limited availability of high-quality raw materials, price fluctuations and supply shortages when purchasing raw materials, rising energy costs and the lack of qualified professionals are the biggest challenges, which we have to face with new strategies. This led us to implement a system of sustainable behaviour within the company and to steer it along standardised paths. As a food producer, we bear a special responsibility for people and the environment. We are convinced that thinking, acting and managing in a sustainable fashion pays off in the long term.

The Loacker sustainability strategy is based on our corporate values, and it is enshrined in the Mission and Vision, the Core Values, the Genetic Code and in our business policies. Our quality and sustainability policy prescribes sustainable management in all business areas.

Achieving balance

Sustainability along the entire value chain

Sustainable development is not confined to protecting the environment. Economics, the environment and social responsibility go hand in hand, creating mutual benefits. We aim to combine sustainability with corporate responsibility. A balance must be struck between ensuring high product quality, environmental protection, social responsibility and securing the long-term existence of our family business through controlled growth and efficient cost control. Therefore, we integrated sustainable practices along the entire value chain.

- We ensure high product quality by using natural unadulterated raw materials and carrying out strict safety checks.
- In the procurement of raw materials, we observe the guidelines of our quality and sustainability policy.
- Intensive research and development allows us to strengthen our position and further expand in our core markets.
- Throughout the production process we aim to save resources, keep the environmental impact low and to work cost-effectively. To this end, we have implemented an internationally recognised environmental management system.
- We engage in fair competitive behaviour with regard to our customers and business partners, and we attach importance to maintaining long-term business relationships.
- As members of society, we support it via targeted sponsorships.
- We provide a work environment in which action can be taken autonomously, and we support the personal and professional development of our employees because they are crucial in determining how sustainable and fit we are for the future as a company.

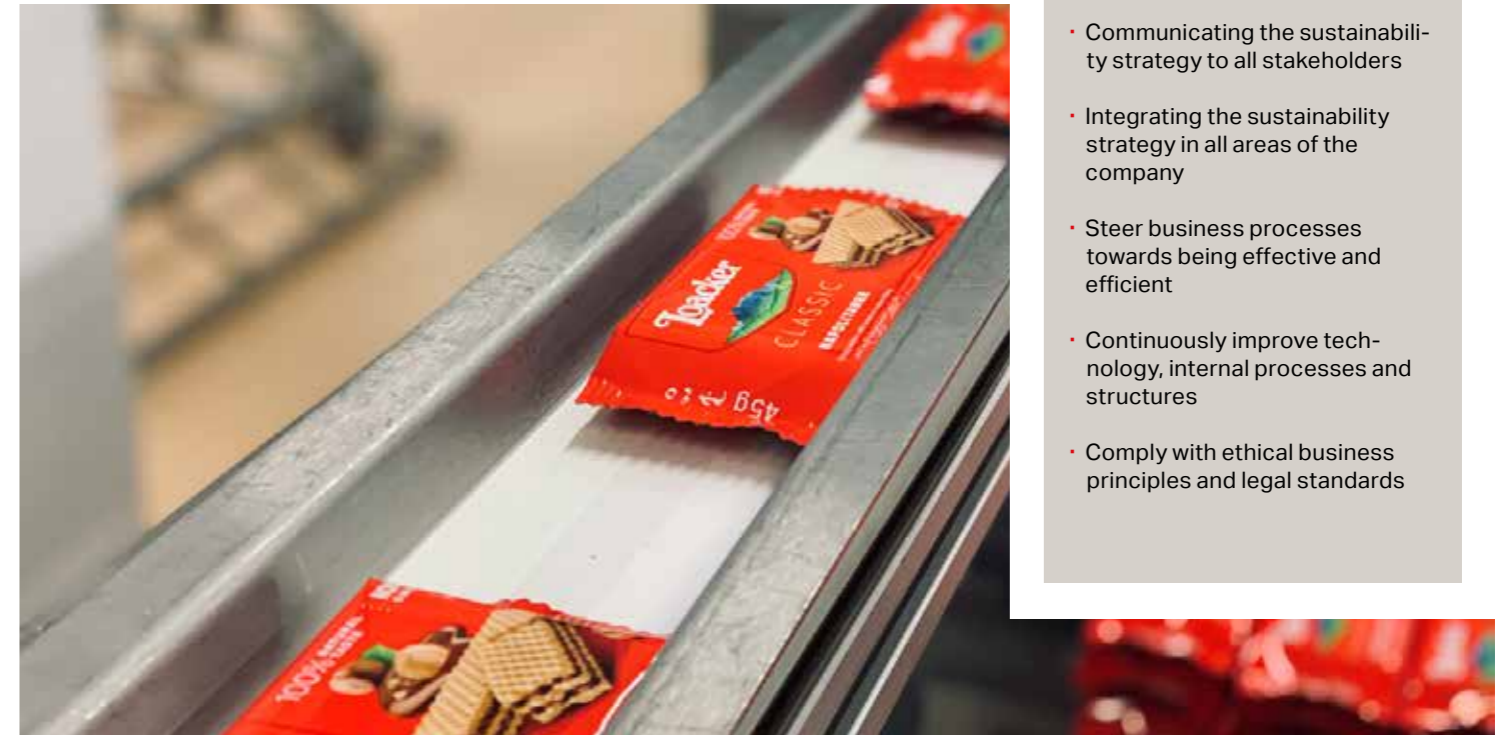

Thinking and acting comprehensively

Objectives and areas of action of the Loacker sustainability strategy

Sustainability is comprehensive and complex. Our commitment to sustainability is reflected in the following strategic objectives in four areas:

Governance and corporate culture:

- Communicating the sustainability strategy to all stakeholders
- Integrating the sustainability strategy in all areas of the company
- Steer business processes towards being effective and efficient
- Continuously improve technology, internal processes and structures
- Comply with ethical business principles and legal standards

Quality and cost-effectiveness:

- Be guided by the demands and expectations of our customers and consumers
- Maintain our high quality and safety requirements relating to our products and their production
- Observe cost structures and cost transparency
- Safeguard independence and financial stability

Resource efficiency and environmental protection:

- Take measures to promote resource-efficient production processes
- Environmental protection at the production sites
- Avoid CO₂ emissions in transport and logistics
- Responsible procurement and use of raw materials
- Avoid packaging materials and waste

Targeted sustainability

Where does Loacker have the largest responsibility as a company towards people and the environment? What relevant measures can we take to promote sustainable business-making? These and more questions were answered in the preparatory work for Loacker's sustainability strategy.

Save water or work more on animal welfare? Favor green packaging or reduce transports? Build a school in the Ivory Coast for children or be engaged to promote and achieve fair remuneration? Making a business sustainable affects every area in a compa-

ny and across the most diverse themes. To ensure we do not get lost among this variety of topics, strategic goals and measures have to be defined. "In our preparatory work to create Loacker's sustainability strategy, we asked which sustainability themes are really relevant for the company and interested parties and target groups. And where do they have a role to play in the value creation chain? What resources are available?" explains Christian Moser, Head of Integrated Management System.

At the beginning, Loacker's value creation chain was divided into four levels: Ingredient production and processing through suppliers; growing and processing ingredients on our own agricultural estates; administration and production offices with upstream and downstream logistics, and clients (import & trade as well as consumers). A number of varied themes relevant to a sustainable business were identified. These themes were assigned to the above-mentioned levels across the following categories: Nature, society, digitalization, and wider society. What were these themes? Greenhouse gas emissions, waste, working standards and human rights. What became the next step? Defining if these areas were relevant for the value creation chain and, if so, where? Where does water consumption play a role, for example? Interviews and surveys were used to get an idea of how important these topics are for the company and both in-house and external interested parties. Costs were not forgotten either and were assessed together with Management: which theme represents an opportunity and which one represents a risk? Which economic effects should we expect?

Based on feedback and impressions received, the themes were then categorized as follows: very important, medium importance, or little importance. Christian adds, "This helps us define how intensely committed we should be to a theme, where we can use our resources, and where we can stand out from our competitors." At the end of the exercise, five very important themes with a vital strategic role for the company were identified. These were then integrated into the Loacker 2030 company strategy (see list). A sponsor was assigned to each theme to be its point of reference within the company. Their role is to ensure that measures for this theme are developed and implemented.

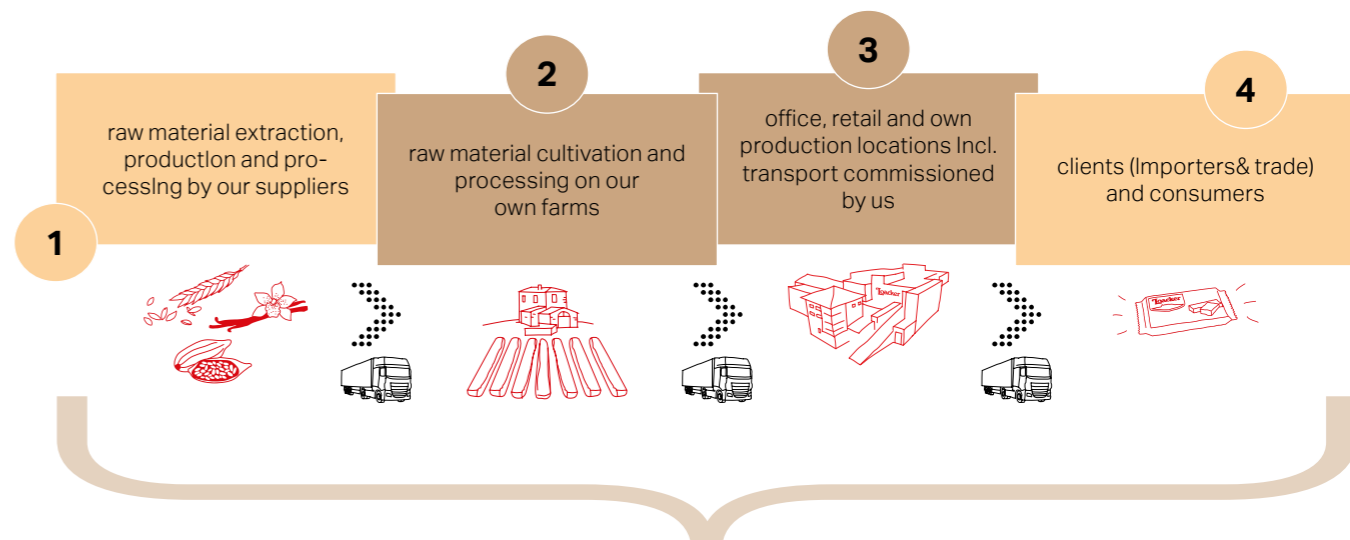

The sponsors will take care of achieving concrete objectives in their working groups. They will determine measured values used as a method of comparison when those very same goals are reached. "We are currently working on finding a clear direction for the wealth of different sustainable activities. This ensures our efforts have a purpose, create clear priorities, and create understanding as to where we, as employees, can contribute to Loacker's role in the world of sustainability," adds Christian.

Employees and society:

- Preventive health measures and occupational safety
- Promote personal and professional development
- Promote diversity and equal opportunities
- Maintain and further develop fair relationships with customers and suppliers
- Commitment to society

Our Value-Adding Stages

Our responsibility towards people and the environment in the product life cycle

Sustainable supply chain
We endeavor to set environmentally and socially responsible standards when using core ingredients in our market. This will make us markedly stand out from our competitors.

Climate neutrality
We take a stand and are accountable for people and nature across logistics, and work consistently to reduce greenhouse gas emissions in our locations. We contribute decisively to reach climate neutrality and aim to secure Loacker's business model in the long term.

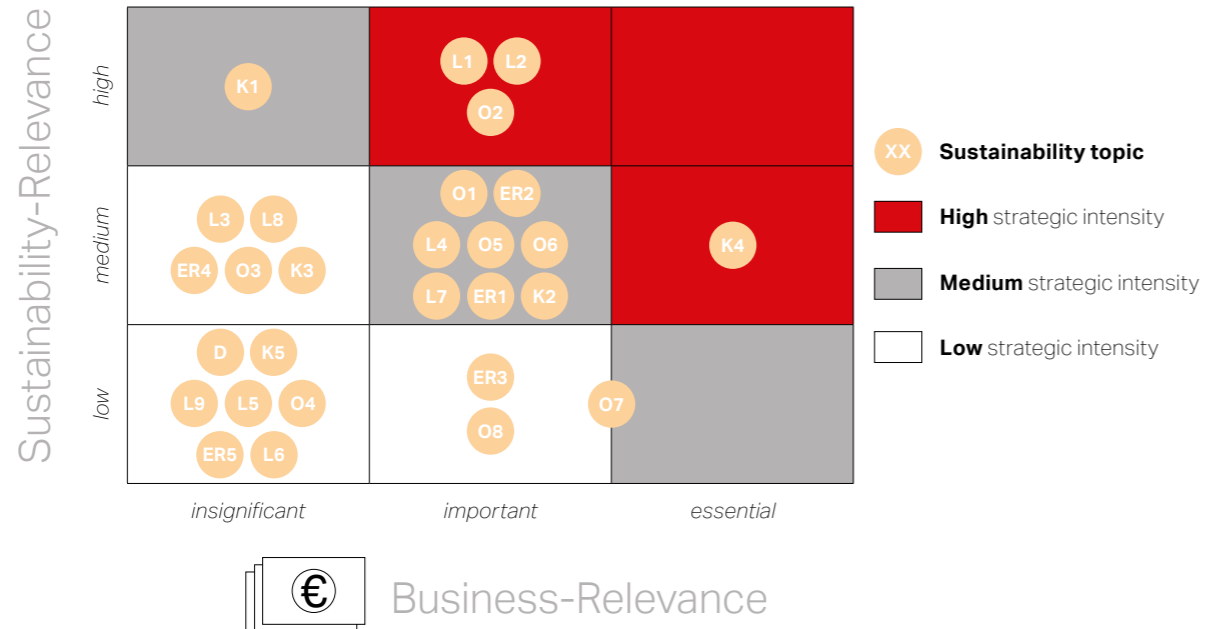

Sustainable packaging
A balanced use of the 7 Rs of sustainability (Rethink, Refuse, Reduce, Repurpose, Reuse, Repair, and Recycle) does not detract from product protection and longevity of our packaging. This means consumers see how much we care about people and the environment across the entire product life cycle.

Mindful indulgence
Products boasting a light natural taste which go hand in hand with a perceived responsibility along the entire product life cycle allow us to meet the urgent demand of our times for taste, wellbeing, and guiltfree joie de vivre.

Our responsibility/accountability towards people in the company
We shape a transparent and inclusive company culture based on values in a purposeful context. We continually develop the organization and forms of cooperation and in a way that makes them future-ready. We promote the professional and personal development of people in the company and invest in creating a healthy and safe working environment. By doing so, we boost our profile as an international, sustainable employer for current and future employees.

Physicality-Matrix (Strategic Framework)

In the area of nature, there are 18 relevant topics concerning sustainability

1	2	3	4
L1: Greenhouse gas emissions caused by the cultivation and processing of raw materials and components for our products by our suppliers . <i>(e.g., from fertilizers, greenhouse gases resulting from the conversion of forests and wetlands, and e.g., from the production of merchandising articles).</i>	ER1: Greenhouse gas emissions caused by our own agricultural operations . <i>(e.g., from fertilizers, greenhouse gases resulting from conversion of forests and wetlands).</i>	O1: Greenhouse gas emissions caused by the production of our products , at our office locations , and by our employee mobility . O2: Greenhouse gas emissions caused by the logistics we commission <i>(e.g. transport to our customers, transport through our e-commerce).</i>	K1: Greenhouse gas emissions caused by our customers who are responsible for the distribution of our products <i>(e.g. transports by our distribution partners, cooling of our products during transport).</i>
L2: Water and air pollution caused by the cultivation and processing of raw materials and components for our products by our suppliers . <i>(e.g. through the use of pesticides and fertilizers, polluted wastewater, organic components, and e.g. through the production of merchandising articles).</i>	ER2: Water and air pollution caused by our own agricultural operations . <i>(e.g. through the use of pesticides and fertilizers, polluted wastewater, organic components, particulate matter from agricultural machinery).</i>	O3: Water and air pollution caused by the manufacturing of our products at our own sites.	
L3: Water consumption caused by the cultivation and processing of raw materials and components for our products by our suppliers . <i>(e.g. through irrigation of agricultural land as well as, for example, in the production of merchandising articles).</i>	ER3: Water consumption caused by our own agricultural operations <i>(e.g., irrigation of our farmland).</i>	O4: Water consumption caused by our employees in the manufacturing of our products at our own sites and at our office sites.	
L4: Negative impact on ecosystem services caused by our suppliers' cultivation of raw materials and components for our products. <i>(e.g. through the cultivation of natural areas and the associated negative effects on ecosystems such as deforestation, water quality).</i>	ER4: Negative impact on ecosystem services caused by our own agricultural operations . <i>(e.g., through cultivation of natural areas and associated negative effects on ecosystems such as deforestation, water quality).</i>		
L5: Waste from harvests generated by our suppliers during the cultivation and processing of raw materials for our products. <i>(e.g. food waste)</i>	ER5: Waste from harvest generated during cultivation and processing on our own farms . <i>(e.g. food waste)</i>	O5: Waste generated by the production of our products at our own sites <i>(e.g. repackaging of raw material purchases, food, maintenance of machinery).</i>	
L6: Wellbeing of the animals necessary for the production of our raw materials. <i>(e.g. cattle, chickens).</i>			

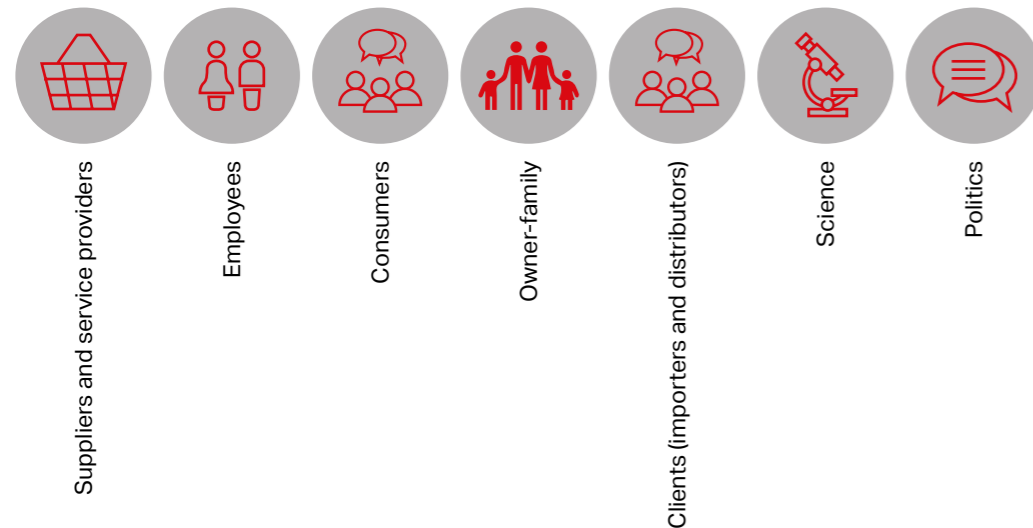

In the further three areas there are 10 relevant topics concerning sustainability

1	2	3	4
L7: Working conditions among the employees of our suppliers who are responsible for the cultivation and further processing of raw materials for our products. <i>(e.g. no child or forced labor, appropriate remuneration, health and occupational safety, freedom of assembly, freedom from discrimination).</i>	O6: Working conditions among our workforce <i>(e.g. appropriate remuneration, health and occupational safety incl. noise and air pollution, discrimination)</i>	K3: Working conditions among the workforce of our customers (importers & retailers) who are responsible for the distribution of our products. <i>(e.g. no child or forced labor, adequate remuneration, health and safety at work, freedom of assembly, freedom from discrimination).</i>	
L8: Human rights of local populations restricted by the cultivation and processing of raw materials for our products. <i>(e.g. land grabbing and land rights/rural exodus and displacement/local groundwater access).</i>			
	O7: Diversity, equal opportunities and opportunities for training and continuing education , especially against the backdrop of lifelong (digital) learning in our workforce	K4: Healthy, balanced and naturally enjoyable nutrition among our consumers . <i>(e.g. through healthier ingredients, avoidance of harmful substances, transparent product and nutritional information and its consequences).</i>	
D: Data security for the data generated, processed and stored in our company, our supply chain as part of our procurement process and/or during data exchanges with our customers (import & trade)			
L9: Assumption of extended (non-business-related) social responsibility in the countries from which we source our raw materials <i>(e.g. through financial or non-material support/establishment of social or ecological projects, funds or foundations).</i>	O8: Assumption of extended (non-business-related) social responsibility in the immediate surroundings of our own farms, production sites and office locations. <i>(e.g. through financial or non-material support/establishment of social or ecological projects, funds or foundations).</i>	K5: Assumption of an extended (non-business-related) social responsibility in our sales markets <i>(e.g. through financial or non-material support/establishment of social or ecological projects, funds or foundations).</i>	

Our key stakeholders

Anchoring the joint sustainability strategy

Defining a company-wide sustainability strategy was a basic requisite to setting ourselves objectives for sustainable management. In order to implement these, we defined our quality and sustainability policy, which serves as a compass for all corporate decisions. Our pursuit of sustainability was also anchored at the heart of our business, in the Vision and Mission, which was reworded accordingly in 2014.

Defining objectives and measures

In the four areas of action - governance and corporate culture, quality and efficiency, employees and society, as well as resource efficiency and environmental protection - we crystallised the key issues for us. In a number of workshops the working groups developed the relevant objectives and initial steps to be taken. To check whether we are

achieving our goals step by step, we assess our actions based on quantitative indicators and qualitative evaluation methods, such as consumer surveys. If necessary, we rectify our approach or adapt it to the new challenges.

Raising awareness, communicating, motivating

Jointly planning the future is a key issue that is taken up with employees again and again, and it is accompanied by a variety of measures. All stakeholders need to cooperate in order to be able to implement sustainable management. Therefore, communication and raising awareness is carried out on a large scale. For example, in the staff magazine "Loacker MyJournal" we regularly inform our employees about the objectives and measures taken in the area of sustainability. Not only does this promote awareness of the issue, but it also encourages employees to think about possible improvements within their own work remit and to develop ideas.

New hires learn about the sustainability strategy during their induction and through the induction brochure. We encourage employees to participate in further training on sustainability issues and ongoing projects, such as lean management, which encourages the optimal use of resources in the workplace (see pages 46).

Training and developing

Mimmola is one of Loacker's brand ambassadors. She stands for love and respect for nature, and aims to convey these values to the world. Mimmola champions a conscientious use of resources, hence her role as a facilitator during the 'Mimmola docet' training seminars introduced in 2018. During these meetings, employees receive numerous tips and insights about the environment and sustainability from internal and external experts as well as tips for a more conscientious, healthier life. Besides these in-house training measures, we are also happy to encourage em-

ployees to participate in external training activities focusing on protecting the environment and sustainability.

Standing our ground.

Loacker practices and exemplifies sustainability out of conviction. On the one hand, the sustainable thinking and acting is reflected in the time every employee devotes to issues such as quality, food and workplace safety, energy efficiency, people or economic efficiency. We promote individual personal responsibility, and believe everyone should set a good example: everyone can and should be able to contribute to achieve our sustainability goals.

We have already taken many steps towards greater sustainability, but many more must and will follow. In some areas, there is certainly scope for more action, processes have to be systematised further and more measures have to be taken. Our efforts allow us to continuously learn and amend processes towards always greater sustainability in our actions.

"Sustainability is achieved thanks to the attention and conviction of people working at Loacker – we practice and embody these values day in, day out. Sustainability is transversal to the entire value chain."

Loacker Corporate Policy

Certifications

ISO 9001: Quality Management according to ISO 9001

The aim of our quality management is to sustainably organise and improve processes and structures, define responsibilities and to work efficiently. The Quality Management standard ISO 9001 is a prestigious and internationally recognized standard. Loacker has been certified to this standard since 1996.

Environmental Management System according to ISO 14001

We want to promote understanding of environmental issues and continuously improve environmental protection within the Loacker Group. Therefore, we introduced an Environmental Management System according to DIN EN ISO 14001 in 2001.

Kosher

International certification for food whose production has been certified by a rabbi.

Halal

International certification for food which certifies that it has been manufactured according to the specifications of Islamic law.

IFS Food and crisis management: ensuring food safety

The International Featured Standard (IFS) Food enables the maximum product safety for food. As a result, very explicit demands are formulated for the HACCP system (Hazard Analysis and Critical Control Points) with regard to the manufacturing and hygiene conditions in the company. The Loacker Group introduced this standard in 2008.

Occupational health and safety is safeguarded by BS OHSAS 18001

We pursue objectives, such as accident prevention, preventive employee protection and maintaining their health, by means of the Occupational Health and Safety Management System BS OHSAS 18001 (Health and Safety British Standard Occupational Management System). Loacker has been certified to this standard since 2008.

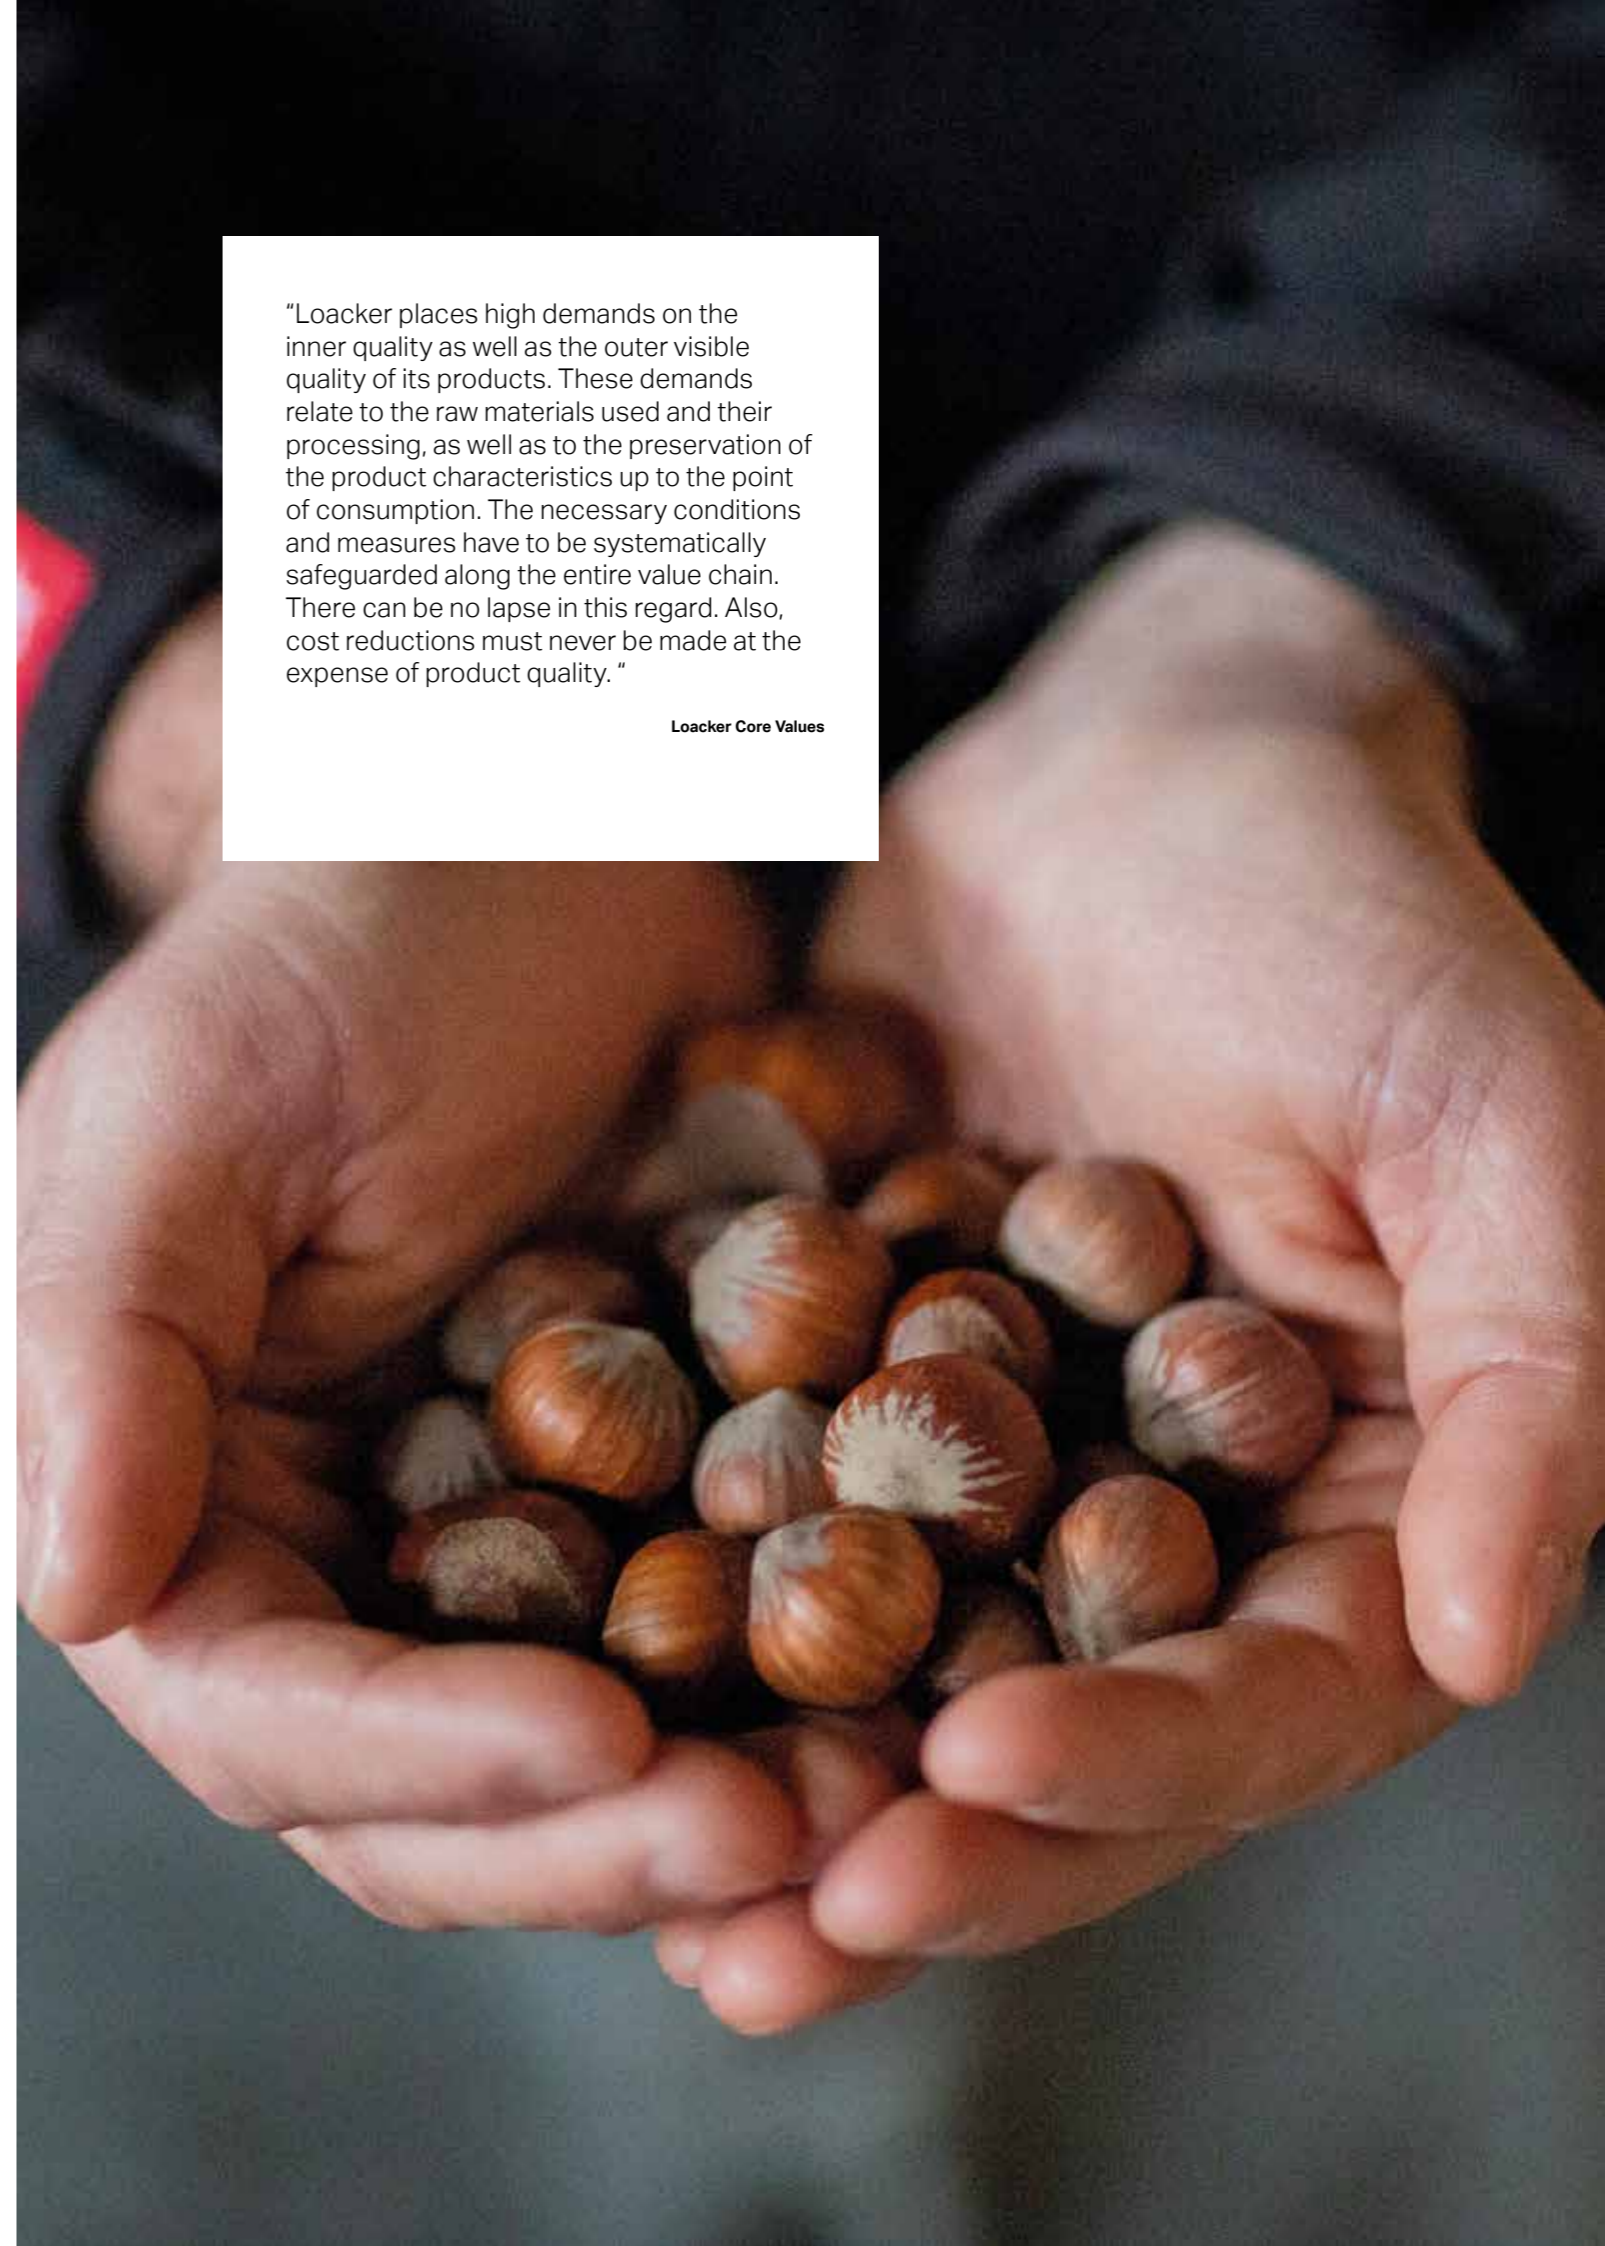

FoodChain ID Non-GMO Global Standard

This standard proves our ability to produce non-genetically modified products and our adherence to the necessary requirements.

In spite of the numerous safety measures, we are aware of the fact that you can never rule out all risks, especially in the food industry. Therefore, the Loacker crisis management has effective procedures in place to deal with exceptional cases and prevent various consequential damages efficiently and quickly.

“Loacker places high demands on the inner quality as well as the outer visible quality of its products. These demands relate to the raw materials used and their processing, as well as to the preservation of the product characteristics up to the point of consumption. The necessary conditions and measures have to be systematically safeguarded along the entire value chain. There can be no lapse in this regard. Also, cost reductions must never be made at the expense of product quality.”

Loacker Core Values

Product Quality with Responsibility

When quality is a guarantee

Systematic quality and safety checks

Loacker stands for the high quality, naturalness and wholesomeness of its products. All our activities are geared towards meeting these high demands on product quality, starting with the selection of raw materials and their suppliers, continuing with the production and finally ending with the storage and delivery of Loacker products throughout the world. But wanting quality is not enough. It has to be verified as well. Our quality standards, as well as the measures necessary to achieve them, are enshrined in our Quality and Sustainability Policy, in the Core Values and in the Loacker Brand Strategy. The parameters are set uniformly across the company and are valid worldwide.

Audit according to international standards

Our production facilities are certified to the international Quality Management System ISO 9001. Product quality is systematically checked from the outset by those responsible for quality assurance. The strict controls ensure that our quality standards are adhered to, and they guarantee the standards of food safety and traceability of our products. Not only do we comply with strict legal regulations, but we are also certified according to the IFS Food standard, which enables the greatest possible product safety for food.

We check our raw materials even before they are processed further. Our food inspectors take samples from the delivered raw materials, which then undergo chemical and physical tests in

our in-house laboratory. These quality and safety checks are carried out throughout the entire production process, right down to product stocks. If it does not meet our high standards, then it will not appear on our shelf.

Checks using all the senses

We also check our products via our sensory panel. Its members are trained to check sensory issues with regard to the taste during internal checks. Do the raw materials fulfil the Loacker quality standards in terms of taste? What effect does storage have on the product? After how much time does the taste quality of a product decline? The 80-strong sensory panel work across the entire company and examine these questions on

the basis of in-house objective tastings as part of the quality assurance process or the incoming goods inspection. The members look at retained samples and carry out warehouse tests to test the shelf life of products. Moreover, the panel is used for consumer research or to assess new products, recipes and packages. In order to obtain scientific results and be able to consult this team on objective measurements, members of the sensory panel regularly take part in training courses.

Gentle production methods

The first step towards a natural taste experience is taken when recipes are developed. The first wafer recipe is a family recipe. A hundred years ago, Alfons Locker made the first "Bozner Schnitten" according to the old Austrian tradition of baking. The process of developing recipes is now more complex, but the criteria are still the same. Natural high-quality raw materials and ingredients, no artificial additives, a balanced composition and best eating quality form the basis for the recipes. But our products should not only taste good, they must also be wholesome. Ingredients that can negatively affect the health of consumers, such as genetically modified raw materials, are not used.

Careful handling of raw materials and ingredients

During production we attach great importance to the careful handling of raw materials and ingredients. We aim to emphasise the special characteristics of the ingredients and preserve their quality. But careful processing also helps to minimize rejects and thus to save resources. Short lead times further guarantee that the products are always packed and shipped fresh and without loss of quality.

New products must be sustainable

At Locker, innovation means more than just creating new products. We are constantly looking for ways to improve even our already successful wafer, patisserie and chocolate specialties. We want to fulfil the needs and desires of our consumers, for example, in terms of new flavours, innovative product categories or package sizes. Our new products always have one thing in common. They must comply with our environmental and ethical guidelines, and their production must be efficient, cost-conscious and sustainable.

Sugar, spice, and everything nice

All Locker products are home-made. They are all produced in our production facilities in Unterinn and Heinfels. And no matter where in the world you find Locker products on the shelves, there is no difference in quality. We pay attention to cultural or religious particularities. Our wafer specialties are both kosher and halal.

A natural taste

"Add goodness, and you will get goodness."

Company founder, Armin Locker

Natural raw materials without additives

„Put good things in and good things will come out.“ This seemingly simple motto by Armin Locker, business founder and confectioner, is valid to this day. We only use natural raw materials and ingredients, in other words those which have been produced according to the relevant standards and have been carefully processed.

Locally grown products preferred

High-quality raw materials are the basis for the quality and taste of our wafer, patisserie and chocolate specialties. Therefore, it is very important to us where our raw materials come from. Locally sourced ingredients are in line with our sustainable mindset because of the advantages in terms of being able to easily check the cultivation methods or short transport routes. We source all raw materials that grow in the Alps or in Europe from that region.

Locker products contain

no artificial additives, such as flavourings or colourings

no preservatives

no hardened fats

no genetically modified organisms

The origin of our raw materials

Raw materials from Europe

Soybean meal and wheat flour from Austria and Germany Sugar from Germany

The cultivation of genetically modified soybean is banned in Europe. Nevertheless, it can be found in many foods available in European countries because soybean imported from the United States, for example, does not comply with this regulation. The cultivation of transgenic soybean varieties has been allowed there since the 1990s. We source the soybean meal for our products exclusively from Austria. Thereby we ensure that it is not genetically modified in any way.

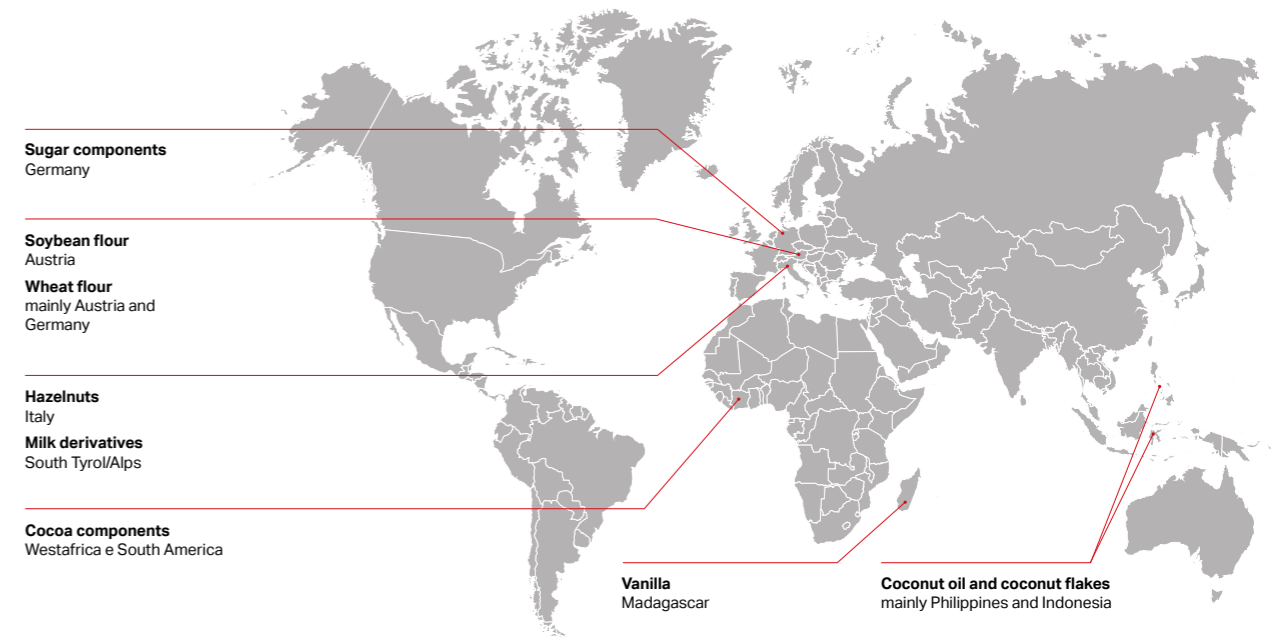

Likewise, most of the wheat flour we use comes from Austria. We source our sugar from Germany.

We produce our own milk derivatives in the Alps

In November 2019, the production of milk derivatives made from alpine milk will kick off in our brand new milk derivatives plant in Vintl. This is the first dry milk derivatives plant in South Tyrol for the foodstuff industry and the second one in Italy.

Italian hazelnuts: own plantations as well as exclusive purchasing contracts

Our independent hazelnut plantation in Tuscany is bearing fruit: Since 2019 Loacker is able to source hazelnuts from its own plantation for the first time. Moreover, the project also created a hazelnut purchasing contract with farmers across different Italian regions. We roast the hazelnuts in our production plants to ensure they have the typical Loacker taste.

Raw materials from other countries

What about ingredients which cannot be grown in Europe? We source them from West Africa and South America (cocoa) and from islands in the Indian Ocean (coconut oil and flakes). We are aware of the local problems in the environmental and social spheres, such as poor education and social services, violations of human rights or child labour. We deal with the risks in these countries of origin by consulting and exchanging experiences with organisations that are working towards providing better conditions on the ground. We have been partners with the FarmStrong Foundation since 2018, committed to the sustainable plantation of cocoa on the Ivory Coast and since 2020 we have a partnership with Maquita for sustainable cocoa cultivation in Ecuador.

Raw materials database and certifications

We are collecting data on the origin of the various raw materials, as well as information on the supply chain, in our raw materials database, which, in future, will be fed with more and more information on environmental standards and risks. We are also currently in the verification phase with regard to the certification of certain key raw materials such as cocoa. We are considering a number of labels, which we are now comparing and taking a critical look at, and we are examining the feasibility of a meaningful certification for certain key raw materials.

Our own plantation

Sustainable hazelnut plantation in Tuscany

Hazelnuts are one of the most important raw materials for Loacker: Loacker's Neapolitaner wafers were named in honour of the nuts due to their Neapolitan origin. To secure long-term, high-quality Italian hazelnuts, Loacker started growing its own hazelnuts in Tuscany. Loacker set up its own agricultural company, spreading across 240 hectares of the "Tenuta Corte Migliorina" in Fonteblanda, Orbetello. Hazelnuts are grown across 150 hectares of land, equaling around 75,000 trees being planted. The surface was extended by purchasing another plot of land: approximately 120 hectares were used to plant hazelnut seedlings across the lands belonging to the "Collelungo" agricultural company. As soon as the entire plantation reaches its maturity and is ready to be harvested, we will be able to collect approximately 550 tons of hazelnuts. Sustainability is, of course, one of our key concerns: our irrigation techniques allow us to save approximately one third compared to the traditional methods.

Business partnerships with local producers

Besides growing hazelnuts on our own land, we have also closed deals with local farmers across various Italian regions. Loacker guarantees the purchase of their entire hazelnut harvest on a long-term basis. Producers will receive comprehensive technical and organisational support from Loacker when it comes to creating and nurturing the plantations. Thanks to the cooperation with universities, cooperatives and agronomists, farmers will also receive expert support. Planting and harvesting the plants will be carried out in line with sustainable principles that Loacker will teach and oversee.

The partnerships were only kicked off in those regions where hazelnut plantations are a sensible alternative and provide a means of diversification for local agriculture.

Since 2019 we are proudly certified according to the EcoMethod. This confirms that our Tuscan agricultural companies, located respectively in Orbetello and Collelungo, managed to reduce CO2 emissions by 91.34% in 2019 thanks to the use of leaf fertilizers instead of conventional fertilizers (according to guidelines for integrated cultivations in the Lazio region). Safeguarding the environment as well as respect for the nature surrounding us are two main pillars in our corporate philosophy. The EcoMethod certificate, which highlights the reduction of Greenhouse gas emissions and the use of mineral fertilizers, is accordingly an additional confirmation of the sustainability of the Loacker project "Italian Hazelnut-Plants".

Milk from the Alps

"Dolomites Milk" is the new milk derivative plant in Vintl

Pure & fresh... naturally alpine milk

"Dolomites Milk" is the new milk derivative plant which has been functioning since November 2019. The plant processes milk and whey derivatives, turning them into powder required to produce Loacker products. The delivered milk and whey are exclusively sourced from the surrounding Alps, which feature spacious meadows and plateaus: the dairy industry in this region stands out for their approach to animal rearing - ensuring they are kept in a near-natural environment in smaller farms - and their careful monitoring of animal health and wellbeing. The

milk and whey we use is also not genetically modified as well as kosher and halal certified.

By collaborating with Brimi, a South Tyrolean milk cooperative, we create various synergies which, among other things, also generates value for regional dairy farmers. We employ sustainable, vertical principals at the heart of the value chain and circular economy in a practical manner. The sum of investments channelled into the building and function of the milk derivative plant amounts to over 30 million euros; this also created 25 new jobs.

At the same level

Fair, long-term partnerships with our suppliers

We are not interested in short-term business. Instead, we have always maintained fair and long-term relationships. We have worked together with some of our suppliers for over thirty years. For us, honesty, transparency, trust and reliable cooperation are important business values. We prefer doing business on equal terms with our partners, who share our guiding principles on fair and sustainable management.

Whenever possible, we source our raw materials directly from the producers and enter into long-term cultivation contracts with farmers. In selecting our suppliers, one of the assessment criteria is whether they have implemented standardised quality management and active environmental management, possess sustainability certifications or organic certificates and have a transparent supply chain. We continuously update this information through constant monitoring.

Eligibility criteria for our suppliers:

- evidence of a self-monitoring mechanism or other appropriate quality assurance procedures
- an active environmental management system with an environmental policy that also includes transport as well as packaging and the disposal of materials after use
- certificate analysing the quality of the raw materials, hygiene requirements, transport quality, shelf life, proper labeling on the packaging for traceability, among other things.
- economic and environmentally friendly packaging
- customer-oriented logistics
- price and service transparency
- flexible delivery

Securing the quality and quantity of raw materials for the future

We want to process only natural and high-quality raw materials, preferably from sustainable sources. This may sound obvious, but how to secure the required amount in the desired quality for years on end is not so obvious at all. Changing crop yields, fluctuations in quality or price instability pose great challenges for our developers and buyers of raw materials. Therefore, we are constantly in touch with our partners and suppliers so that we are also able to fulfil our quality standards in future.

Providing for fair working and living conditions for cocoa farmers

Our partnership with the FarmStrong Foundation

The sustainable procurement of raw materials is a primary goal for Loacker. We have been acquiring cocoa beans cooperating with local associations from Ecuador and Cote D'Ivoire. With our "Loacker Cocoa Farming Program" we promote fair supply chains, a sustainable cultivation through local farmers and social projects.

New Partner in Cote D'Ivoire

Up to now, Loacker has been working together with FarmStrong Foundation in Cote D'Ivoire. Starting from 2022 we decided to cooperate with two new partners: Sucden and Agroforce. Both organisations work together with local cooperations which directly supply us with high-quality cocoa beans and organise various projects concerning sustainability. The cocoa beans are then processed into cocoa paste in Italy and Germany, which is finally used to produce Loacker chocolate in our factory in Unterinn since 2021

Local Sustainability Projects

The cooperations, and hence also Loacker, support local development through multiple sustainability projects in Cote D'Ivoire. On the one part, courses are offered which allow farmers to learn about agricultural techniques aimed at improving cultivation and quality as well as about a lawful use of fertilizers or the composting of natural fertilizers. A second crucial aspect concerns deforestation and child labor, both of which represent a major issue in the country. A monitoring program allows for each farmer to be constantly locatable, allowing us to ensure that our cocoa beans do not originate from deforested regions. A further monitoring program carried out locally by a team aims at ensuring that no child labor takes places. Breaches and violations are tackled with education programs which provide information about why kids should attend school rather than work on the plants and about the general importance of culture and education. Additionally, both cooperations initiated programs to improve women's financial autonomy: for example, Agroforce carries out a corn- and vegetable-project with local women, in order to provide them with a source of income. Such sustainability projects are oriented at on-site circumstances which increases the support they directly contribute to the local population and safeguarding of the environment.

Supporting vanilla farmers in Madagascar

We are currently developing a three-year programme to support small farmers growing vanilla in Madagascar. Our goal reflects the one mentioned above: to source vanilla directly from local producers and promote on-site, sustainable development by means of financial aid.

Since November 2019, we have been supporting vanilla farmers in Madagascar. We purchase part of our vanilla requirements directly from local producers and support the local development with a sustainability project.

Your opinion matters

What customers and consumers think of us

We always strive to meet the demands of our customers (retail and distribution partners) and of the consumers of our products. As with our suppliers, we also maintain trusting, long-term relationships with our customers. For our part, it is essential that we are reliable in processing orders, there is a high product availability and we respond quickly to customer enquiries. We are always in touch with our customers to keep them informed about developments in the company and to make them aware of our commitment to sustainability.

We have a standardised Customer Management System (CRM) to increase the benefits to our customers. With the help of this methodical tool we plan, manage and improve our customer relationships. In 2013, as part of the CRM we carried out a customer satisfaction survey. In those countries where we have our own sales structure in the market, retailers were surveyed; internationally we surveyed our importers. In future, we aim to measure customer satisfaction twice a year.

Customer satisfaction: results for international sales

Worldwide Loacker stands for the highest product quality, best taste and naturalness. Loacker achieved high marks on most criteria in the evaluation (up to 9.50 on a scale from 5 to 10). In individual markets, the premium price segment is rated as critical.

Customer satisfaction: results for sales in Italy

In the interviews, Loacker was described as a reliable and competent supplier.

In Italy, Loacker is the quality/brand leader and there is a high degree of brand awareness. In the interviews, the company was also described as a reliable and competent supplier. Differentiation is primarily achieved through product quality. Customers perceive our ability to innovate our wafer products as very strong, while there is still scope for expanding our product range.

78%*

of Italians indicate Loacker Classic Wafers as one of their favorite products

96%*

Loacker World of Goodness and Confectionery Workshop

How do we make our wafers? What is important to us, and where do the raw materials come from? Loacker wants to provide consumers with wide ranging insights into the company and its manufacturing process, and we aim to achieve this with the Loacker World of Goodness and its Confectionery Workshop at the production site in Heinfels. On a tour of the Loacker World of Goodness, visitors can inform themselves in an entertaining way about the company and the origin and processing of raw materials. Since 2014, the World of Goodness also includes an interactive Loacker Confectionery Workshop. Groups and individuals are given instructions so they can make their own Loacker wafers here and thereby learn about the production process.

Loacker gnometti as brand ambassadors

Their names are Mestolo, Cremolo, Vanigliola or Lattolo. They are the ambassadors of the Loacker brand and guarantee the quality of the products. The gnometti come from the world of Dolomite legends, the same mountains that are home to the head office of the Loacker

brand. Each of the six gnomettis has its own distinctive name which refers to a specific area. Gnometti Mestolo, for example, is a pastry chef who stands for the crispness of the Loacker wafer; Cremolo and Vanigliola stand for the creamy vanilla and cocoa spreads or Lattolo

(from the Italian "latte" for milk) for the quality of the milk. The friendly gnometti have been around since 1982 and are used as Loacker brand ambassadors in TV commercials, on packaging or at sales points. They are very popular with consumers, especially in Italy.

Prizes and awards

International prizes and awards confirm we are on the right path. In 2003, company founder Armin Locker received the **"Candy Kettle Award"** in other words the „Oscar of confectionery manufacturers". This prize is awarded for outstanding achievements in product quality, product development, marketing and international cooperation.

In 2007, we were happy to receive the **"Sweets Global Award"**, which is awarded by the international confectionery trade association „Sweets Global Network", an established and leading industry network with 300 member companies.

The award **"Sapore dell'anno"** („Flavour of the Year,") is one of the most important awards in the area of taste quality. The globally recognized prize is awarded by the organisation of the same name on the basis of extensive consumer surveys. In order to award this prize for quality, blind taste tests are performed which mainly evaluate the sensory product characteristics in comparison with rival products. The only valid evaluation criteria are taste, appearance, odour, and product consistency. Locker

received the award in 2012 and 2014 for the Locker Classic Wafers and in 2013 for the Locker chocolate snack bar Choco &, in 2017 for the Cocoa&Milk wafers, and in 2018 for the Speciality and Classic chocolate bars.

Locker was awarded the **"Export Award Südtirol"** in 2011. The Autonomous Province of Bolzano honours outstanding local companies whose innovative, exemplary ideas improve South Tyrol's competitiveness. Locker was awarded this recognition for its consistent brand management and the successful creation of an internationally sound sales operation.

In 2016, Locker received the **"Sweetie Award"** for its Locker Gran Pasticceria White Coconut. The prize is awarded every year by the 'Rundschau für den Lebensmittelhandel', a specialist foodstuff magazine. An independent jury assesses the submitted products and selects the top sweets and snacks of the year across 26 categories.

The **"Prodotto dell'anno"** (product of the year) was awarded to Locker's chocolate bars in 2018. This recognition is based on the assessment made by 12,000 consumers and is awarded to innovative products on the Italian market.

Also Israel awarded our Chocolate Bar with the price of the **"Product of the Year"**.

In 2020 a series of further awards followed worldwide:

- 1. Key Award and 6. Radio Key Award with **"La bonta è una scelta"** in Italy.
- Sustainability Award at the hospitality-fair in Bolzano/South Tyrol
- Awarded as Top-Brand by the German Food-Journal (Lebensmittelzeitung)
- **FairPrice Partners Excellence Award** in collaboration with our partner in Singapore

- Double Choc **"Product of the Year"** in Slovenia
- Double Choc awarded the **Influencer's Top Prize** in Poland
- Tortina Triple Dark wins the **Sofi Award** as "Best New Product" for the category cookies in the US
- The 54g Chocolate Bar Napolitaner wins in 1st place at the ECRM & Candy Industry Buyer's Choice Award in the US

In 2021 "Tortina Caramel" wins the **"Sweetie Award"** in Germany again and in 2022 the same prize is awarded to Locker's new product "Classic Peanut Butter".

"It has always been important to us to take into account environmental factors when making business decisions. Increasing environmental problems, stricter environmental legislation and a growing interest by our stakeholders in sustainable development are further strengthening our efforts to protect the environment. We are committed to systematically integrating environmental protection issues into company and management policy. Negative environmental effects resulting from business operations are to be prevented or at least kept to a minimum."

Locker Quality and Sustainability Policy

Environmental protection & responsible use of resources

Standardised environmental protection

Binding.
Responsible.
Active.

We take our environmental responsibility very seriously. We want to prevent negative effects on the environment as much as possible and use resources efficiently. The economic and careful handling of raw materials and energy is in line with our business values, but is also indispensable for cost reasons. Binding principles on environmental protection are anchored in our Quality and Sustainability Policy, in the Core Values and in the Brand Strategy.

Certified Environmental Management

Since 2001, Loacker production sites are certified to the international Environmental Management standard ISO 14001 and are audited annually. This certification guarantees that the company has defined a specific environmental policy and that our employees ensure compliance with these standards. Of course,

we also take into account national and region-specific regulations and provisions and comply with them. Every year, we collect key figures for energy consumption and CO2 emissions, which are documented in our environmental report. Where necessary, these serve as a basis to find ways to save and use resources more efficiently.

Sustainability in the production process

Not only the use of energy but also the use of raw materials requires care. So during the entire manufacturing process - from raw material processing to packaging - we pay attention to keeping lead times short. Our production facilities are designed to be flexible so that production can be coordinated in the best possible way. Targeted planning and methods to optimise set-up times, our bottleneck management, standardised work procedures and optimised internal logistics are important building blocks in creating an overall efficient production process. We are constantly improving our processes and technologies with the aim of saving resources.

Commitment by all

Even small measures can add up to big savings. Where feasible

we use lighting control. In the production plants, light domes are installed to direct natural light into the building. Contactless taps save water, older electrical appliances are replaced with new energy-saving models. There is a shuttle service for employees between our sites in Unterinn and Bolzano to reduce the amount of private individual traffic. It is mainly for transporting production staff from collection points to their place of work and back. An internal fleet is available for car-sharing. Meetings are increasingly held by means of a video-conferencing system to keep work-related trips between sites to a minimum.

Since 2001, Loacker's production plants have been ISO 14001 certified (international environmental management standard).

Excerpt from the Loacker Quality and Sustainability Policy

Production process and locations

Safe and sustainable: our production processes and locations live by these values and use resources sparingly producing low emissions, especially when it comes to greenhouse gases and other emissions as well as energy, material, water and soil use, as well as sound, waste water and waste.

Committed to protecting the environment

We are responsible and are committed to avoid impacting the environment via our sustainable corporate management and limit eventual repercussions on our health and the environment.

Transport and logistics

The prevention and reduction of CO2 emissions, as well as air and noise pollutants, resulting from the transportation of goods and people is a key objective for the company.

Responsible procurement and use of raw materials

For the purposes of quality and quantity assurance of raw materials, we aim to source a high proportion from sustainably farmed resources, not least to promote biodiversity and protect the water supply. When quality is the same and prices are competitive, we give preference to partners and suppliers from the region.

Packaging material

Our goal is to limit the consumption of resources and to improve resource efficiency. This includes preventing and reducing the amount of waste resulting from packaging material and closing material and energy cycles.

Less is more

Efficient use of energy and resources

The production of food is energy-intensive. Baking wafers requires a large amount of energy and, in addition, a cooling process is also necessary to ensure product quality. Even during the development and construction of our production facilities, we look at how we can save energy and use it efficiently, for example, through energy-efficient drives, energy-saving construction of buildings and optimised building and energy technology.

The constant employment of improvement and modernisation measures support us when it comes to saving energy. In the 2016/17 cycle, we replaced the existing lighting system in some rooms of our Unterinn and Bolzano locations with an energy-efficient LED system. In Heinfels, we reduced the times at which outdoors lighting is active to limit light pollution and energy consumption. Moreover, in the production plant in Heinfels we renovated the cold exchanger. This means that we continue to maintain the same cooling system but at a lower electricity output due to a lower condensation temperature.

Although we are constantly working to improve energy efficiency and are implementing a number of energy-saving measures, the reduction in overall energy consumption is only limited. Our efforts to save energy are offset by the manufacturing process, which is becoming increasingly mechanised and automatised due to higher quality and safety requirements, and the growth in

production volumes. In absolute terms, sometimes also in relative terms, this leads to rising energy consumption.

Fuels

Our electricity supply is 100% green. It comes from renewable sources, water and wind. In May 2011, a photovoltaic system was installed at the Unterinn site, generating more than 66,000 kWh of electricity a year. In 2021 another photovoltaic system was installed in Heinfels, which produces approximately 500,000 kWh annually (in comparison a one-person household consumes approximately 2,500 kWh annually). The installation produces about 5% of the total power we need gas to heat the ovens for the production of wafers. For technological reasons, it cannot be replaced by a different fuel. In June 2018, the production plant in Unterinn shifted from propane gas to methane sourced from the public grid: this allows us to save on approximately 40,000 kilometres of travel per year, which had been necessary up to now to deliver propane gas on trucks.

Heat recovery instead of heating oil

We recycle the waste heat from the baking process in all our manufacturing facilities. Through the use of heat-recovery systems we can use the heat from the ovens to heat the production areas and to provide hot water.

We only use petrol to cover peak periods. Thanks to co-generation, we saved approximately 1.7 mio. liters of fuel between 2019 and 2021, corresponding to approximately 5,600 fewer tons of CO₂.

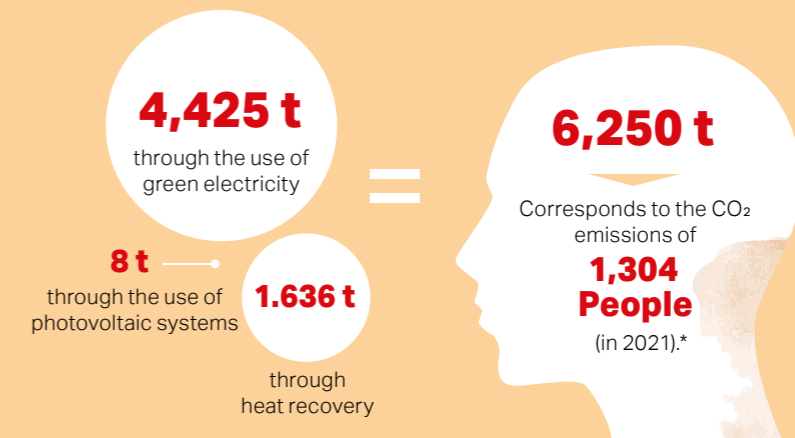

Emissions

The operations of our company cause relatively few emissions. By using modern technology, we can keep the emissions generated by our production sites below the required limits. To reduce the amount of hazardous substances produced by cars, we increased our fleet by adding two e-cars. Employees can use these when carrying out maintenance work in the outdoor areas as well as for business trips. E-cars will be recharged with electricity using our docking stations: as our electricity is 100% green our cars are as green as they come.

Environmental protection and conscious use of natural resources

100 %
green electricity
in our production sites

Saving of CO₂

Assumption: worldwide 4.7t CO₂ emissions per person

Saving heating oil

* Assumption: 11,200 kWh per 70 m², 10.4 kWh = 1l

The key figures are taken from the sustainability report 2017 and refer to the year 2017.

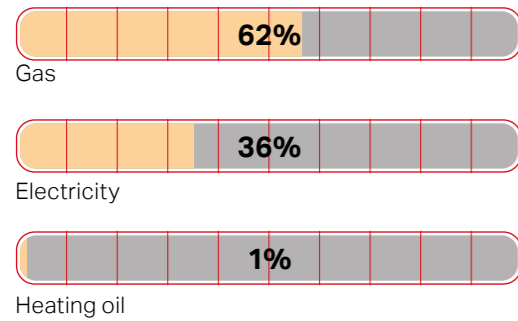

Key figures on energy consumption

All figures relate to the production sites Unterinn, Bolzano and Heinfels.

Total energy consumption

2020	69.340
2021	65.709

Water and waste water

The quality of the water plays an important role in the manufacturing of our products. Water is needed for making the dough, and it has to be perfectly clean. That is the reason we build Locker production facilities in places where the quality of the drinking water is very high. Therefore, the protection of water resources is also of major concern to us. In Heinfels we laid our own water pipes independently of the local water network to access the drinking water source and thereby took

responsibility for securing the supply and control of the water.

We keep contamination of the waste water to a minimum. In Heinfels we installed grease traps that filter oils and grease from the waste water before it flows into the sewerage system. Measurements provide evidence of the good biodegradability of our waste water.

The sparing use of water is a matter of course for us. At both locations we collect ground or rain water and use it to irrigate all our green spaces. Through the use of water-saving technologies in our sanitary facilities we reduce water consumption.

waste separately, such as paper and cardboard, plastic or wood, and recycle it. 48% of our waste consists of paper and cardboard, followed by 14% plastic and 3% wood. This means most of our residual materials can be recycled. Only two percent of the total amount of waste is made up of pollutants, for example, the oils filtered from the waste water. We pass on the contaminated waste to specialised service providers who guarantee a safe disposal.

Recycle unsaleable foods

It is inevitable that wafer baking sometimes produces broken pieces that are not suitable for sale. But with us food never ends up in the rubbish. Wafers that are unsaleable because they are broken, but otherwise in perfect condition, are reworked or passed on to local farmers as animal feed.

Waste prevention and recycling

Our approach to waste is based on preventing waste and recycling as many reusable materials as possible. We collect all our

65% of the used residual materials can be recycled.

Harmless and hazardous waste

Types of waste	2009	2010	2011	2012	2013	2014	2015	2016	2017	2018	2019	2020	2021

Ideal protection.

Saving on materials thanks to smart packaging

High-quality product packaging is necessary so the consumer can enjoy fresh, undamaged wafers and chocolate specialties. The packaging foil must protect the product against harmful effects, such as moisture, oxygen, odours, light and UV radiation. This allows us to dispense with preservatives. Therefore, packaging considerations always have to balance different requirements. On the one hand, product quality must be guaranteed and transport also imposes conditions on the type of packaging. On the other hand, we want to reduce the amount of packaging materials and use environmentally friendly materials. Compromises are necessary. Environmentally friendly materials do not always guarantee food safety or the preservation of product quality.

Compatibility with the environment and health

Our wafer products are wrapped in specially designed composite foil for dry baked goods (primary packaging). For larger product units we use resealable packaging. The transport or display packaging (secondary packaging), however, is made of cardboard. In order to meet our standards for sustainability and product quality, all our packaging materials are aimed at being highly compatible with the environment and health.

This includes their production, as well as their capacity to be recycled or disposed of in an environmentally friendly way. We check whether the producers of packaging materials have implemented an environmental management system and use environmentally friendly ink. The requirements in this regard are defined in our packaging specifications, and wholly unacceptable packaging materials are listed.

Conserving materials

In recent years, we were able to reduce the amount of packaging materials and to optimise existing packaging. We standardised the packaging so the same transport packaging can be used for several products. The use of a thinner packaging foil resulted in material savings of approximately 10 tons. We reduced the use of plastic foils and replaced them with cardboard. This allowed us to save 20 tons of polypropylene. In collaboration with our largest packaging supplier, we were able to reduce the CO2 footprint of our primary packaging by 2%.

In 2018, we invested in a second new stretcher in Heinfels after a material use test. This covers palettes with a stretch film to be protected during loading. For the same amount of operations, the machine uses 50% less material.

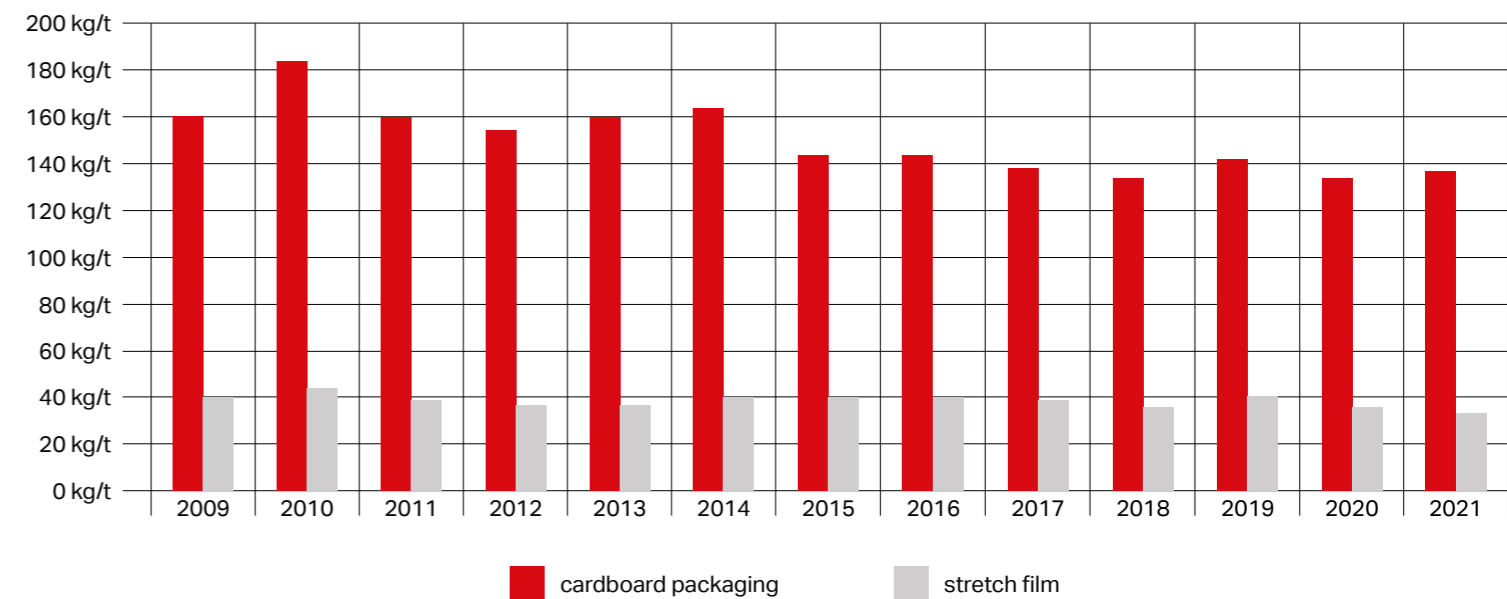

The new machine allows us to save approximately 3 tons of plastic film a year. Moreover, we are currently working hard to reduce and optimize the recyclability of packaging materials. Thanks to a new type of heat-sealing film we want to achieve an improved recycling capability and a significant reduction of materials. Even as far as cold-sealing films are concerned, we are currently looking at ways to achieve savings. As soon as both projects

are completed, we will be saving approximately 15-20% of the entire amount of films, in other words a total of 300,000 kg of films.

Back in 2018 we used 770 tons of packaging material. Since then we have optimized our packaging thanks to a new formula and were able to reduce the amount of material to 650 tons. This means we produced 120 tons less plastic waste which correspond approximately to six school buses or medium-sized trucks of packaging material

We have focused on the packaging of every single product line in order to reach this accomplishment. Consequently, we reduced the plastic contained in freshness-preserving packagings by 15% on average. More precisely: we reduced the plastic content of our Classic-Line by 25% and by 17% in the packagings for our patisserie specialties. It is additionally worth mentioning that all our packagings made out of polypropylene are fully recyclable.

Since 2022 we have firstly introduced a new product line which is wrapped in a recyclable paper-packaging.

-90 t of plastic
by reducing the thickness of the packaging for our wafers
(in 2021)

Green transport

Organizing green transport and logistics

As a manufacturing business we are dependent on having raw materials and other materials delivered to us, as well as on making delivery of our products. To this end we work together with external logistics partners. Our distribution logistics department fulfils both the strategic and operational tasks with regard to distribution, and it is the point of contact for our logistics partners. Optimising the management of this process is important, for example, by reducing empty transports and optimising transports. The central warehouse of our logistics provider is located in Corteolona (near Piacenza, Lombardy). The main warehouse of our logistics provider is located in Calcio (Bergamo, Lombardy). From here, the delivery of raw materials takes place to the Loacker locations and the delivery of Loacker products to the points of sale. A further, small warehouse is located in a strategically smart location between both production plants in Chiusa, South Tyrol. From here, the packaging materials and raw materials will be taken to locations in South Tyrol and East Tirol. Loacker can rely on other warehouses in the US (New Jersey) and in Germany (Baden-Württemberg). These external locations guarantee efficient and quick logistic operations which is worth its weight in gold to our clients. To save on energy and CO₂ to run the warehouse, we give precise our logistics partners to store our products.

We have taken the first steps towards increasing the percentage of goods shipments weighing

less than 100 kilograms. Furthermore, we are currently collaborating on a project with transport provider DHL Italy in which the CO₂ footprint is captured and the logistics partner sets key indicators for CO₂ emissions. Suitable tools for measuring CO₂ are being checked. As a further measure, the baseline should be established in order to take further steps towards reducing CO₂ emissions.

Reducing emissions and empty transport

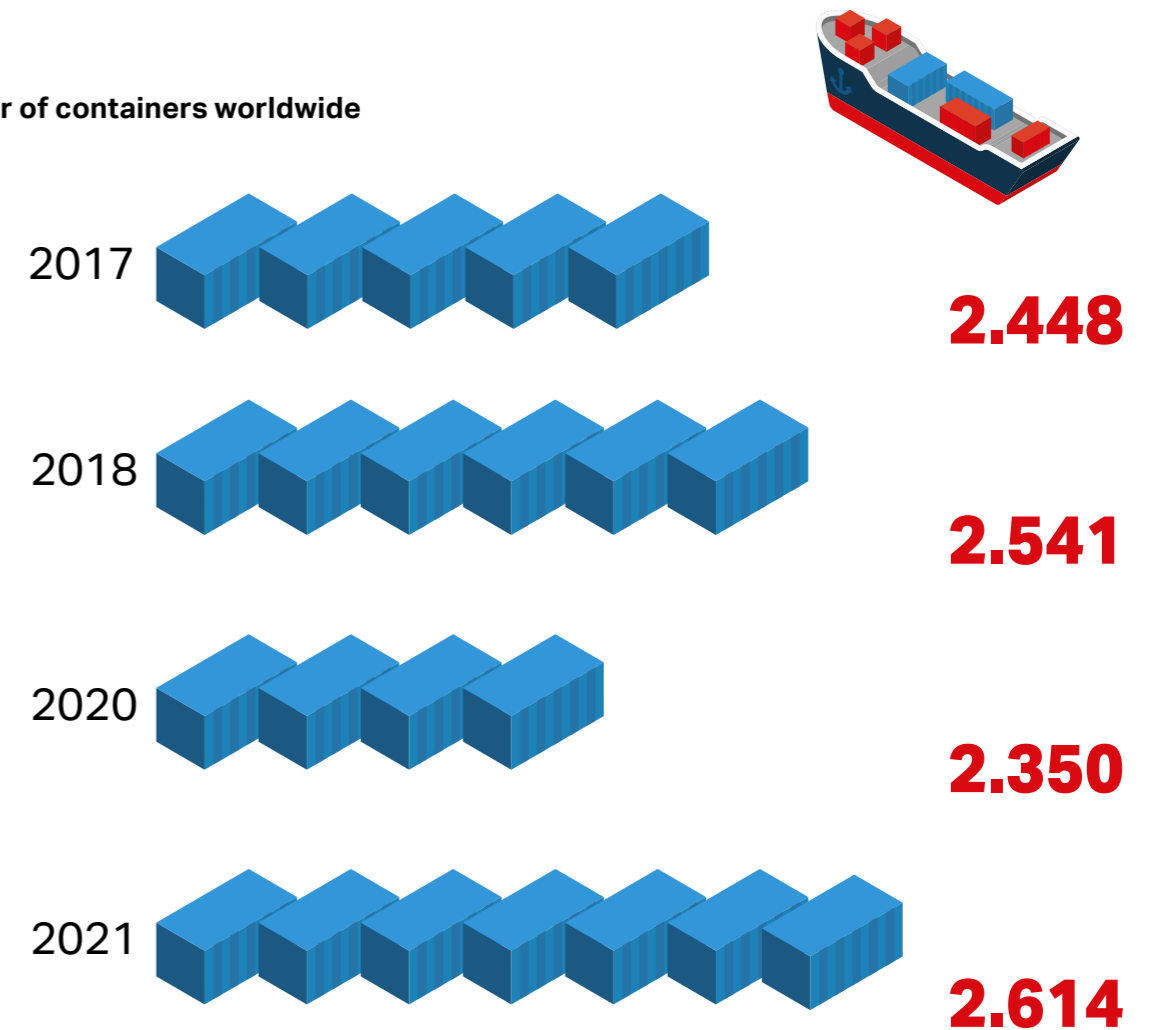

Together with our transport partner, we ensure diesel-fuelled trucks are used for transport. By doing so, we achieve CO₂ savings of up to 20%. We also try to use liquid nitrogen gas-fuelled trucks (LNG) allowing us to reduce emissions by 100%. Basically, the car park of our transport partner is exclusively composed of trucks belonging to the Euro 6 transport norm or higher.

To reduce the amount of drives, we favour trailers with a larger capacity. By using these special trailers, this results in an increase – approximately 15% - in loading space. We pay attention to the fact that we optimally use all the space in the trucks and pool inbound and outbound deliveries for our production locations. By using a precise layout when loading the trucks, we can avoid trucks sitting idly with their engines on, therefore avoiding unnecessary, energy-intensive cooling of the trailers.

We have natural gas powered trucks since 2020

Number of containers worldwide

Employees develop sustainable ideas

Lean management

How can we use resources efficiently and prevent waste in the production environment? Our staff can provide many answers to this question. After all, they are experts in their job and know best how to optimise workflows, save resources and make the production environment as efficient as possible.

As part of the Lean Management project, employees are coming up with concrete opportunities for improvement and are prov-

ing to be creative in providing ideas for sustainable efficiency. Initially, they take training courses in teams of two at a recognized institute for lean management in Austria. As part of this training, they come up with actual optimisation projects, such as ways of preventing machine downtimes, wafer breakage or other production errors. Everyone can and should get involved in implementing sustainable business practices in the company.

"Our employees are crucial to the positive development of our company. Skills and experience, commitment and dedication, enthusiasm and passion are essential to meet the high expectations we and others have of us. We encourage professional and personal development and strive to create an environment in which employees can develop and grow, find meaning, take responsibility and thereby deliver top performances."

Loacker Corporate Core Values

Involvement comes first: shaping and participating in the company.

Space & participation

We see our company as a living system in which everything is interconnected: Everyone carries responsibility for the company as a whole in their role and in their area of work. We encourage initiative and promote the individual strengths of each employee through various measures. Our employees are given enough freedom and scope for making decisions to act independently within their work remit and help shape their work place in line with their needs. We encourage our employees to take personal responsibility and to participate, and we see them as experts in their field of work in which they themselves can develop and implement improvements towards working more efficiently, for example, through lean management.

hierarchies are dismantled and managers are easily accessible. Our managers receive regular training in the areas of participatory management and systemic organisational and company management to strengthen this trusting working environment. Our Leadership Guide and Manual were developed in the process of a participative process to support Management in their tasks. Through interdisciplinary work in project teams and joint learning we promote togetherness and increase employees' identification with the company.

Participatory leadership

Our managers are like coaches in supporting the development of employees and strengthening their individual skills. We practice a participatory management style with clear responsibilities where we face each other as equals with mutual respect and appreciation. Our "open door" principle ensures that

"Locker's Management promotes equal dialogue and makes time for carrying out one-to-one talks."

Excerpt from the Locker Leadership Guide

Locker MyJournal - our magazine for employees

The magazine for employees "Locker MyJournal" is an important tool for communicating and building a link between the company management, other managers and employees in the various Locker sites. The magazine is published two to three times a year, reports on developments and projects within the company and thereby enhances shared knowledge and values. The Locker MyJournal provides transparent information and fosters mutual understanding, as well as understanding for changes within the company. Employees are directly involved in producing the magazine - as editorial members or by suggesting topics and being interviewed.

Cafeteria for employees

We operate our own cafeteria for the employees in Unterinn, Bolzano and Heinfels, which serves a freshly prepared three-course lunch every day. We pay particular attention to serving regional and seasonal ingredients. Alternative dishes are provided for vegetarians or people with food intolerances. The large tables in the cafeteria encourage people to meet from across departments and hierarchies.

114,044 meals

to the tune of 900,000 euros were served in 2018 in the employee canteens

Respect comes first.

Integration, diversity and equal opportunities

The rapid growth of the company created a number of new jobs in many different areas. An induction plan and programme is in place to help new employees along when they first join the company and ensure a smooth start in their new jobs. During the introductory event we introduce the company, our values and core activities. Members of the Locker family and the company's management as well as other managers welcome the new employees and familiarise them with the company, its guidelines and values, products and markets. In this context, we also explain the importance, content, objectives and measures of our Sustainability Strategy. There is also an introductory brochure available to ensure quick work place orientation that provides practical guidelines to employees but also explains our Sustainability Strategy. A personal tutor, i.e. a reference person not belonging to one's own division, will support the new employee, acting as a mentor by replying to various questions and supporting them in their social integration.

Talent management system

The talent management system, which was introduced in 2014, supports the search for and selection of new employees, as well as the education and training of the entire workforce. On our intranet portal for employees and managers "Locker Campus" everyone has their own personal profile and a record of their training history and can sign up for any of the courses currently offered as part of the training programme. Job vacancies are also listed on the portal so that any employee can apply or pass on the job offer to friends and family.

"We believe understanding and respect for other people's way of thinking, honesty and reciprocal appreciation to be the basis for mutual growth and a profitable long-term cooperation."

Locker Mission Statement

1,608 students visited Locker's offices in 2019*

Commitment to young people

Our holiday jobs, internships, and apprenticeships right across the company offer young people the first opportunity to get to know the Locker company. Especially during summer, but also during the other months, our trainees support the different departments across our locations with practical projects. They get to know the everyday business routine and learn about Locker as a potential employer. In addition, in 2019, 58 school classes from different types and levels of schools with more than 1,608 students visited the Locker sites in Unterinn and Heinfels to learn about the company. Locker employees also go to schools to give presentations and hold information sessions. Interns and undergraduates are also very welcome to gain practical experience in the company or to carry out research.

Diversity enriches

As a company that is active worldwide we come into contact with people from different cultures every day. Respect, tolerance, openness and mutual respect are essential prerequisites for dealing with one another. It is clearly stated in our corporate core values that we do not tolerate any form of discrimination against people on the basis of their gender, skin colour, race, ethnic origin, religion, beliefs, sexual orientation, language, nationality, age or disabilities. Any employee who experiences or witnesses discrimination is obliged to immediately report this to the responsible manager or the company's neutral and unbiased supervisory body. We penalise all forms of discrimination with disciplinary measures.

*Asterisk due to no visits during COVID.

Growing together.

Personal and professional development

The increasingly complex environment requires our employees to have a high degree of professional and social skills. They are the pillar of the company and crucial to its success. Due to demographic developments and the shortage of skilled workers, we strive to retain dedicated employees for the long term and to foster their professional and personal development. We support them in participating in training events and provide a wide range of internal training programs for different target groups.

objectives to set for themselves and in which areas they want to develop further.

Increasing employee satisfaction

How satisfied are employees about their work place? Where can we improve? We regularly carry out an anonymous employee survey featuring different satisfaction criteria. The results are used as a starting point to create concrete and targeted improvement measures.

Annual employee performance review

The annual personal discussion between employee and supervisor supports the individual development of each employee. In the context of this confidential discussion, employees are shown appreciation for their work and their performance is assessed. Views are exchanged on the individual skills and opportunities for improvement. In addition, personal objectives and development opportunities are discussed and relevant measures agreed. Each employee decides which

Randstad Award

Loacker receives an award as the most attractive employer in northeast Italy

Every year, the Randstad Award is awarded in different countries to the most attractive employer. Companies cannot apply themselves for this award. They are selected on the basis of factors such as the number of employees (200-999 employees) or areas of production. The Randstad Award is purely an audience award. As part of a large survey, only employed people, students and job seekers are interviewed. Their opinion counts in the assessment, not that of the employer or the interpretation of business data. These aspects make this award so special. They guarantee the independence and objectivity of the survey and of the choice for the award. The results clearly reflect how the company is perceived in society.

In 2015 and 2016, Loacker received the Randstad Award for northeast Italy. For this purpose, more than 4,000 employed people, students or job seekers aged between 18 and 65 years were interviewed. Loacker was ranked in first place out of one hundred companies from the region because, according to the survey, Loacker fulfils the ten most important criteria of an

attractive employer - competitive wages and benefits, career opportunities, strong leadership, pleasant working environment, job security, work-life balance, sound finances, interesting work, good standard of education and social responsibility. Loacker was voted the best company in the categories pleasant working environment, job security and sound finances.

Prevention and well-being

Our Health and Safety Management is not limited to workplace safety and the prevention of accidents and risks. It also includes preventive measures and takes into account the human being in its entirety. Therefore, we offer our employees a variety of ways to stay healthy and to increase individual well-being. For example, the office workstations are ergonomically designed and employees receive health advice for working with computer screens. In the production departments, where employees work on assembly lines or do shift work, we pay attention to having constant changeovers to reduce negative health effects. Health training, as well as information sessions on work-life balance or diet enable employees to protect and look after their health. The "Locker Tennis Club" or sponsored participation in various sporting events are all initiatives aimed at supporting our employees in their healthy leisure activities.

Health care: occupational health support

Occupational health is an important element in any company, ensuring we carry out exams

periodically for those employees who suffer from safety and health risks at the work place. These works may be working during the night shift, or can be found lifting and carrying weights or even simply be exposed to loud sounds. The exams don't only serve the purpose of achieving a good state of health, but are also used as a preventive measure to boost health. During a monitoring phase, occupational health doctors analyse a patient's health and physical limitations and will prescribe protective measures to contrast the situation in a timely manner.

Ready for any emergency

A trained emergency response team is ready to spring into action across all our locations if need be. They will step in when medical or technical accidents occur and provide professional assistance. The emergency response team is composed, among others, of employees trained in first aid and voluntary firemen, fire and evacuation managers and a team leader. Everyone in the team regularly participates in specific training sessions and workshops as well as practice drills.

"As a family-owned company we are wholeheartedly committed to our company locations and take our social commitment very seriously."

Locker Management

We are people persons, and it shows

Engaging in the region's communities

For us, corporate responsibility also means commitment to our social and cultural environment. We want to contribute towards shaping an environment that is worth living in and prepared for the future. This strengthens the region's profile in terms of location competitiveness and increases the quality of life and job opportunities for the people living there and our employees. As a local family-owned company we are wholeheartedly committed to our company locations and take our social commitment very seriously. By paying our contributions and taxes, which we pay where we are actually working and generating value, we are making a significant contribution towards local sustainable development.

Contributions towards regional development

Our main factory in Unterinn on the Ritten and our plant in Heinfels in East Tyrol are located in the rural periphery, away from the urban centres of the region. These areas, in particular, are increasingly facing the challenge of emigration. Especially young, well-educated people here are looking for jobs with scope for

development. In addition, there are only limited job opportunities available in these communities, which leads to a high level of commuting among other things. As an international and leading innovative company, we are making an important contribution to regional development. On the one hand, as a local employer Loacker creates and secures numerous jobs in structurally weak areas. On the other, we offer jobs for a variety of professional qualifications that are hard to find in a region that is predominantly characterised by agriculture and tourism.

Research and Innovation

Regionally, we have a pioneering role in the areas of innovation and international collaboration. Through our activities knowledge is transmitted throughout the region and the business locations of South and East Tyrol are developed further. This drive for innovation also helps to shape a modern and sustainable knowledge-based society and establish an international network in a region that is predominantly characterised by agriculture and tourism.

We offer interns and university students numerous opportunities in the company to deepen their research or put it into practice.

In 2010, this spirit of innovation and contribution to a positive future for the region earned Christine Zuenelli-Loacker, co-founder of the family business and member of the board, the merit award of the province of Tyrol, "Great Order of the Tyrolean Eagle in Gold".

Cultural commitment: renovation and revitalization of the Heinfels Castle

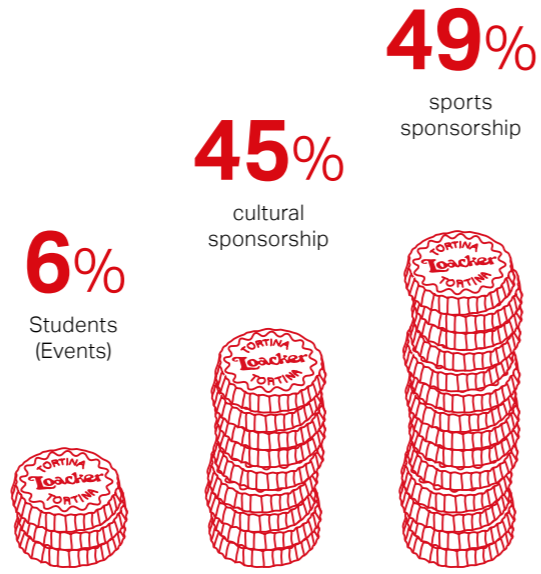

Heinfels Castle is a vast fortress above Heinfels in East Tyrol. The strategically located fortification is a striking landmark of the Eastern Puster Valley and a cultural and historical jewel. Together with the "Heinfels Castle Museum Association" we are dedicated to revitalising this historic building. From 15 July 2020 the completely renovated castle will be open to the public again. The largest part of the castle complex houses the museum, which can be experienced on guided tours. In a second construction phase, the gastronomic part of the west wing will be completed in a few years. An ambitious goal has been achieved, considering the ruinous initial state of the imposing complex, which has been more or less left to decay over the past decades

Sponsorship

We are active as sponsors, especially in sports, where we promote regional sports teams and youth sports. We are the main sponsor of the handball club SSV Bolzano Loacker (Italian Champion 2018/19) and co-sponsors of the ice hockey team of the club "Hockey Ritten" which competes in the European "Alps Hockey League" and is based on the same mountain plateau as our main production facility. We also support larger sports events of national interest and with a broader impact.

At regional level, we operate as a product sponsor, both for cultural events and for initiatives that further the common good, such as club celebrations. Product sponsorship allows us to support a greater number of local clubs and to achieve a geographically balanced distribution of our sponsorship activities.

Sponsorship by sector

Sponsorship - South Tyrol

"We make people all over the world happy with our pure and wholesome natural goodness."
Mission

Generations of natural goodness

Company profile

In 1925, Alfons Loacker takes over the confectionery business of his retired boss in Bolzano (South Tyrol/Italy) and thus begins making fine confectionery and dry baked goods for the first time under his own name and own brand. Increasingly, he specialises in the production of wafers and cream in the old Austrian tradition. From then the business has grown to become the internationally known brand Loacker that is present in more than 100 countries. Today, we are one of the leading confectionery manufacturers in the high-quality wafer, patisserie and chocolate specialties segment. Especially in the last few years, the company has been able to expand internationally and grow its market,

which has led to constant growth for the business. Nevertheless, we continue to be a down-to-earth family business that is extremely successful on the basis of its 90-year-long tradition and product quality.

Quality a priority for generations

The highest quality standards drive our thinking and actions: the best natural raw materials, quality recipes, as well as gentle processing methods employing the latest production technology, have guaranteed our product quality for generations. Satisfying the demands of our global

sales and distribution partners and fulfilling the expectations of consumers, in particular, is what motivates us time and again. Intensive research and development, as well as improving our technological expertise and our products, allows us to consistently strengthen our position in the core markets of wafers, premium pastries and chocolate. When we open up related market segments, we always maintain our high quality standards and thereby maximise synergies. Every employee is encouraged and challenged to take on personal responsibility for improving and developing the performance in their area of competence.

Fairness and long-term cooperation

We attach great importance to fair competition, solid and long-term business relationships with our customers and suppliers and to working in partnership with many stakeholder groups. Operating internationally as we do, the company works together with people from different cultures and speaking many languages. We believe that understanding and respecting the mindset of others, approaching each other openly and honestly and valuing our interaction with one another are the basis for mutual growth and profitable collaboration.

Sustainable growth

Take on economic and environmental responsibility

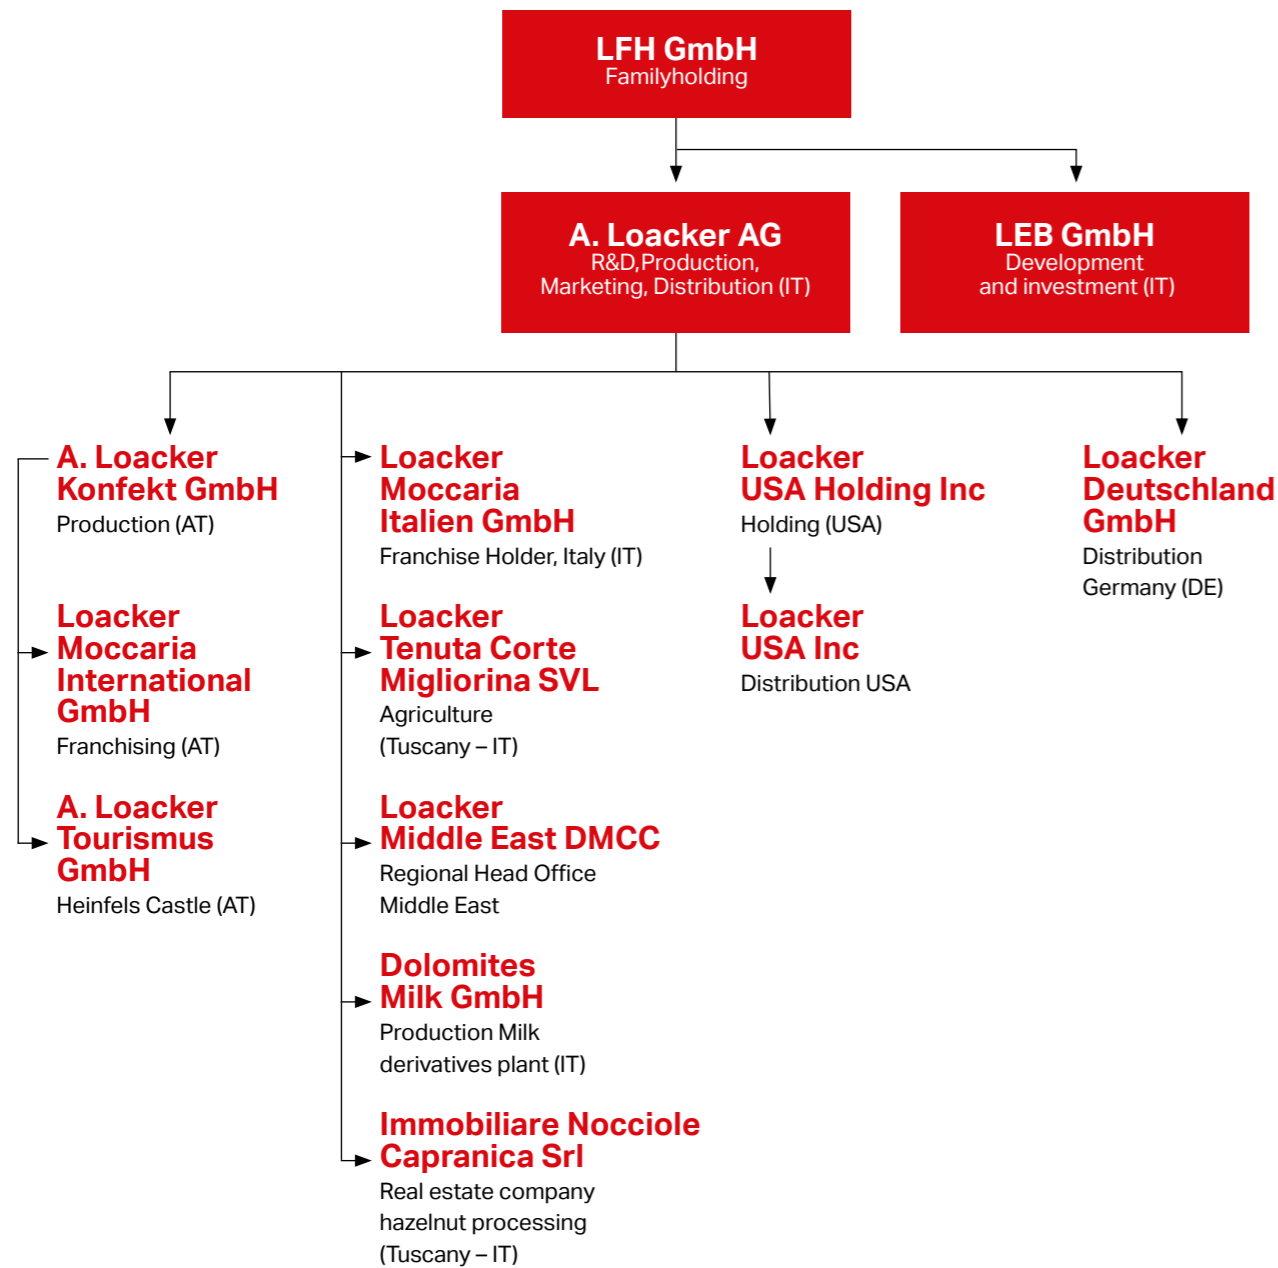

Healthy and sustainable growth, risk diversification, profitability and mostly equity financing guarantee stability and thus the independence of our family business. We have always focused on a solid capital base. This allows us greater independence from financial markets, while on the other hand safeguarding the necessary financial flexibility to take advantage of investment and growth opportunities and to survive times of crisis unscathed. In order to maintain this capital base, members of the business family as well as company shareholders have for the most part always done without dividend payments. Instead, the profits made are invested in the company. Due to the high levels of capital, this is essential in order to finance the continued growth with our own funds.

In addition, we see ourselves as a responsible member of the local economy and as part of the population. Therefore, we do not pursue an aggressive tax policy whereby we transfer profits to low-tax countries. Instead, we pay our taxes where we are actually operating and thus create added value.

We also see it as our duty and as a daily challenge to be aware of our environmental responsibility. We are convinced that an environmentally friendly approach to business will bring benefits in the long term. This applies to the resource-saving and low-emission set-up of our production processes and sites, as well as to the sourcing of our raw materials and to the closure of the materials cycles in terms of our packaging materials.

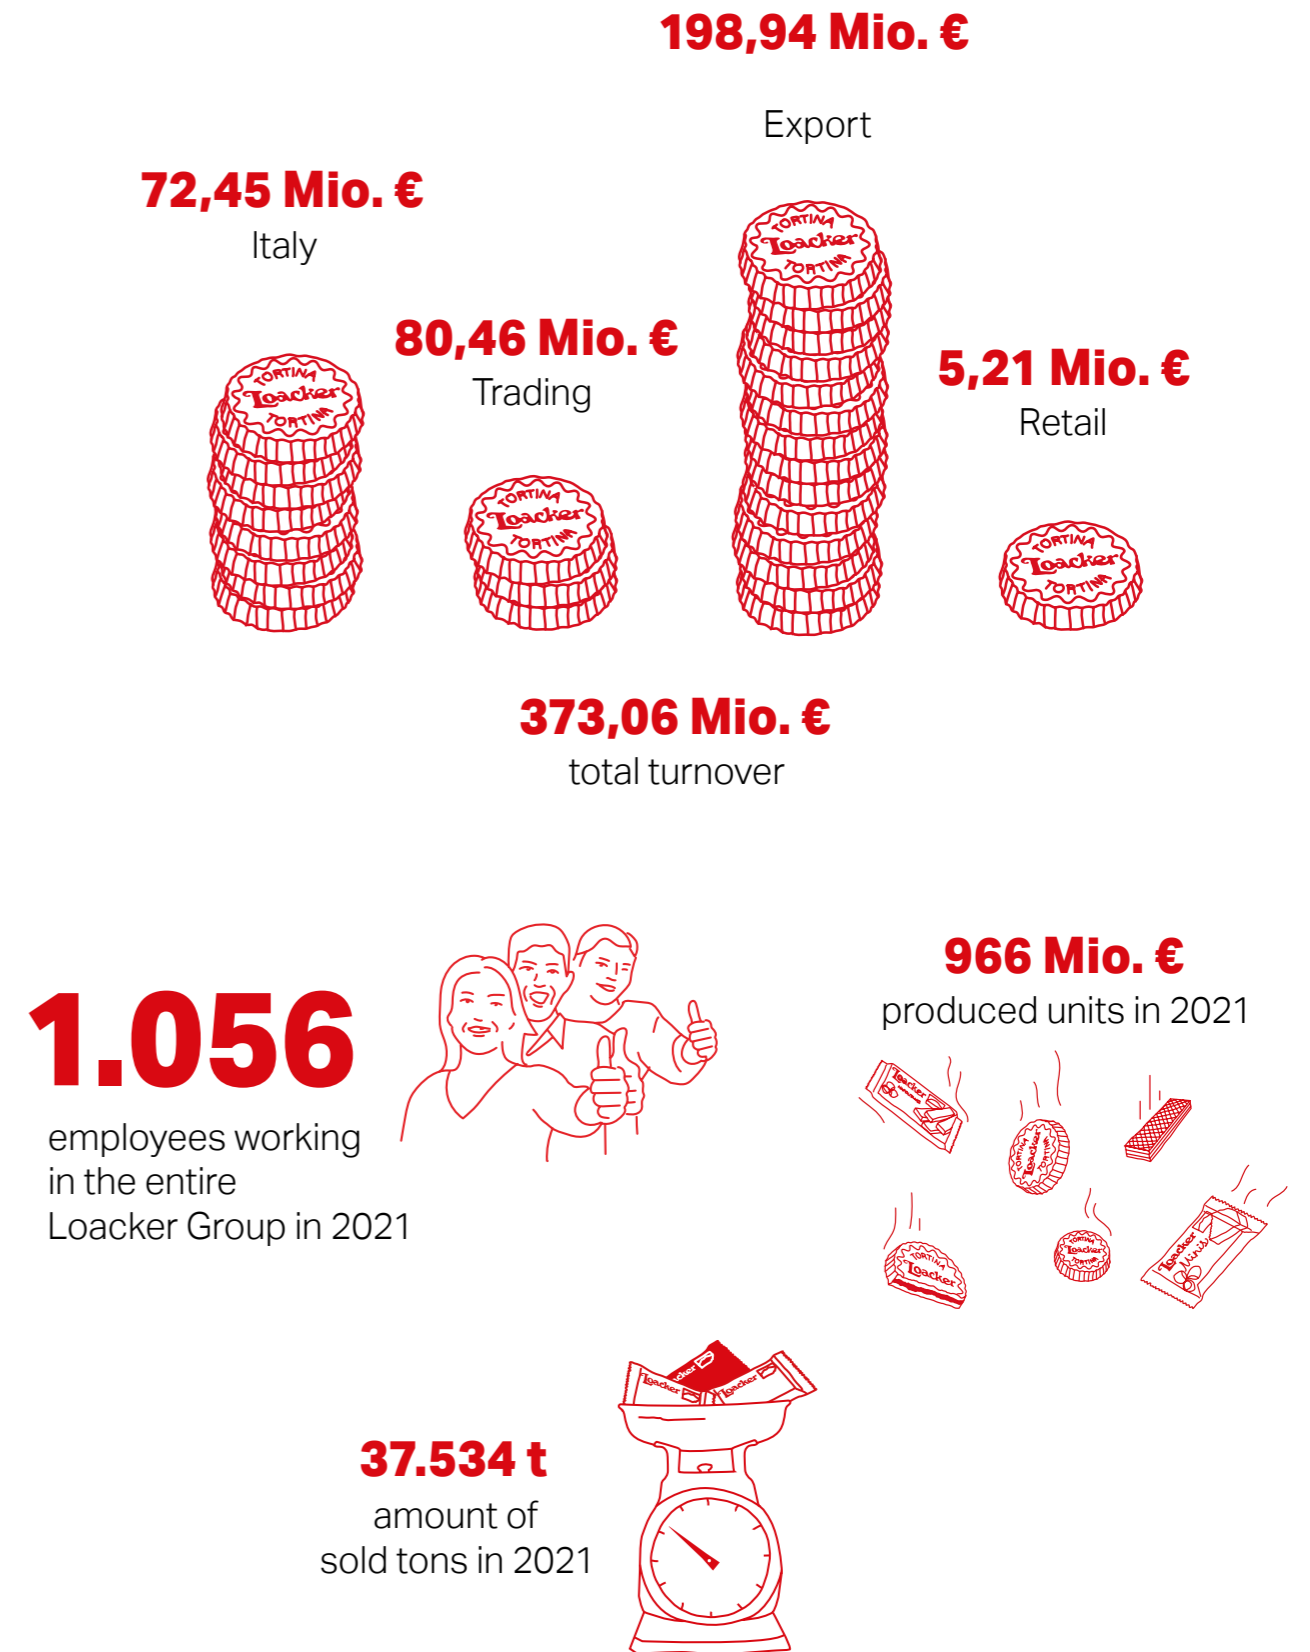

Overview of the Locker Group

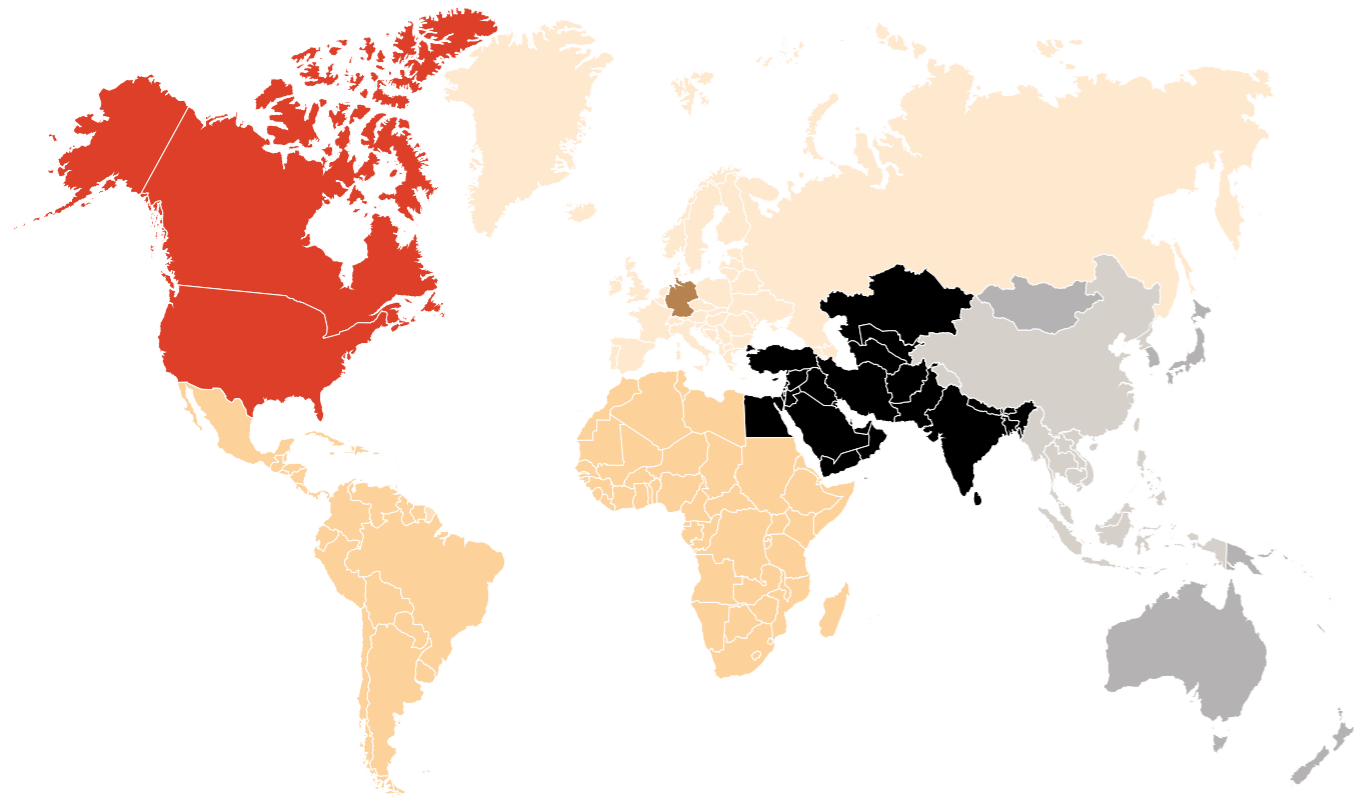

The development of the Locker Group is marked by continuous international market expansion, as well as diversification and innovation of products. In 1925, the confectionery business was founded by Alfons Locker and wafer production was started. The second generation, son Armin Locker and daughter Christine Locker Zuenelli, took the helm in 1958, embarking on a shift towards the standardised and mechanised production of wafers.

The wider distribution of Locker wafers began in 1975, to begin with in northern Italy, and just four years later saw the start of global exports. Strong growth markets are currently the Middle East and Asia (in particular, China and South Korea), as well as Europe. The retail business started up with the opening of the first Locker Cafes, then called Locker Points of Sale which included the Locker Moccaria and Locker BrandStore in December 2007. Locker Retail is also on course for international expansion

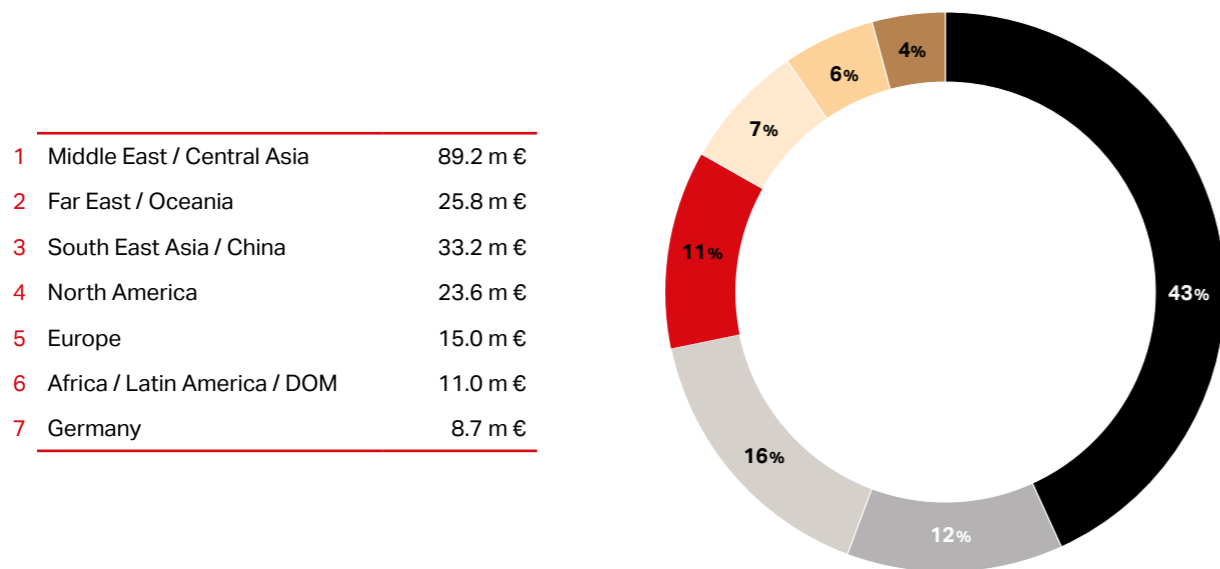

Locker: an overview

Locker product portfolio

Products, retail and distribution partnerships in Italy

Locker offers a wide range of high-quality wafer, patisserie and chocolate specialties. The principles for Locker products are defined in the brand strategy:

Highest quality standards

The raw materials used and the manufacturing process must satisfy the defined quality standards in order to preserve the product characteristics until consumption. The necessary conditions and measures are systematically safeguarded throughout the entire value chain. Cost reductions must never be at the expense of quality.

Unique taste

In addition to the best raw materials, balanced recipes and careful processing serve to create the best characteristics for consumption for all Locker products.

Maximum naturalness

The raw materials and ingredients must be as natural as possible and carefully processed. No artificial additives of any kind are used.

Wholesomeness for consumers

By using natural raw materials, balanced recipes and gentle processing, we are able to manufacture truly wholesome products. The aim is to combine taste and wholesomeness so that consumers can enjoy our products without any negative consequences as long as they don't consume them excessively.

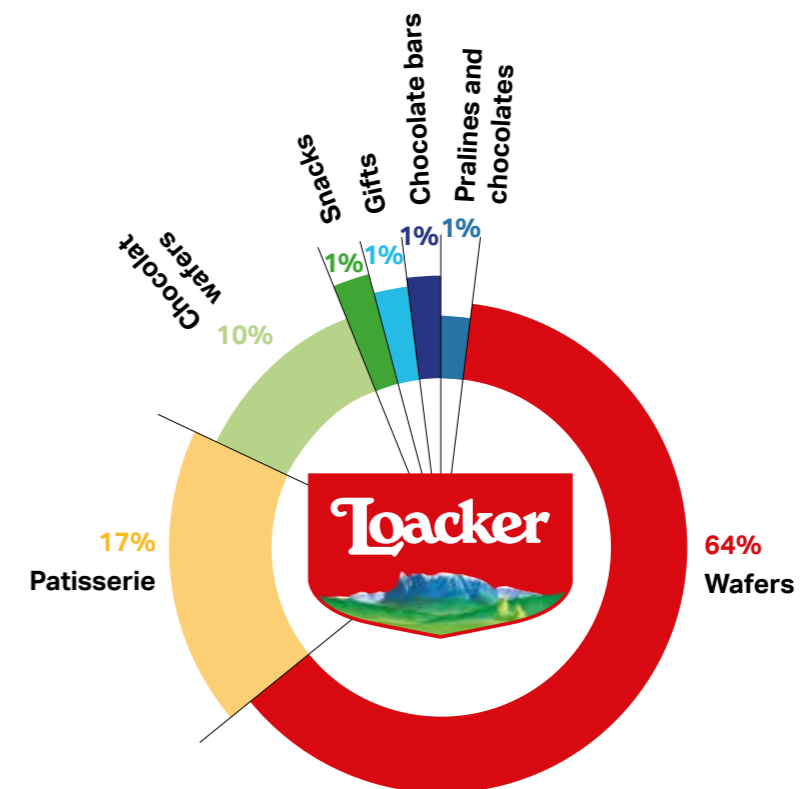

High-quality wafer and chocolate specialties

Locker product portfolio

The Locker product portfolio has been expanded beyond the classic wafers to patisserie specialties, chocolate snack bars, chocolates, chocolate bars and cream spreads. The entire Locker product range, including gift and seasonal items as well as custom products, comprises around 200 items. The development of each new product is in line with the Locker brand. Although our product range is broad, we ensure that it is uniform across all markets. Regional and country-specific varieties are avoided.

Strategic markets

Locker Café

Cafe and Brand Store under one roof

You can experience the whole Locker universe upon crossing the threshold of a Locker Store. Taste delicious coffees and heart-shaped wafers, amazing breakfast choices and delicious ice cream creations. Many of the dishes and beverages are combined with the well-known Locker creams, which can also be found in the traditional wafers.

Besides the wafer creations, the cafe also stands out for its very own coffee mix as well as its homemade ice cream. The Brand Store features over 200 Locker wafer and chocolate products as well as exclusive gift ideas and limited editions. Experience the wafer variety in the Locker Store, a fun experience for all ages.

Locker as as distribution partner

for international brands in Italy

South Tyrol is located in the heart of Europe. Its location in northern Italy on the border with Austria and Switzerland makes the region a bridge between Italian- and German-speaking countries. The multilingualism of its inhabitants (64% of South Tyroleans are native German speakers, 25.84% of Italian mother tongue, 4.52% belong to the Ladin minority), as well as its geographic location make South Tyrol an ideal location for international companies operating in Italy. As a result, Locker has acted as the distributor of the international brands Twinings, Ovaltine, Pema, Darbo, and Lorenz in Italy. These distribution partnerships create synergies and allow for the efficient use of existing resources, for example, in the areas of distribution and transportation.

Production sites

Proximity to natural surroundings has been and still is a decisive factor in the selection of our production sites. Excellent water and air quality, as well as a dry, cool climate, are among the important factors underpinning our product quality. Protecting the environment is our priority. We aim to keep any negative effects on the environment generated by our production plants to an absolute minimum. We achieve this through the use of renewable energy and energy recovery systems, among other things.

Main plant in Unterinn (South Tyrol, Italy)

In 1974, the main Loacker plant was established in Unterinn on the Ritten at an altitude of approximately 1,000 metres above Bolzano with a production facility that has expanded over the years. The site is far away from any industrial centre, which is unusual. The decisive factor in choosing this location was the excellent spring water that is available here, as well as the high-quality mountain air. In addition to the production de-

partment, the in-house development and innovation centre, as well as the administrative headquarters, are located in Unterinn.

The production facility in Unterinn manufactures wafer and chocolate specialties, with the manufacturing processes geared towards flexibility and a wide range of products. In addition, half-finished products, such as hazelnut and coconut paste, as well as confectionary products for the Loacker Stores are made here.

Bolzano (South Tyrol, Italy)

All gift packaging, marketing and advertising materials are made at the Bolzano site.

Heinfels (East Tyrol, Austria)

In 1999, a second Loacker production plant was opened in Heinfels in East Tyrol (Austria) at an altitude of more than 1,000 metres. Wafer products are made here, with the manufacturing processes designed for high volume and performance. The Heinfels site is also home to the Loacker World of Goodness with its pastry workshop and to a Loacker Store.

Milk derivative plant 'Dolomites Milk GmbH' in Vintl (South Tyrol/Italy)

As of November 2019, milk and whey derivatives will be processed into powder at the milk derivative plant. The raw materials will be sourced from nearby areas in the Alps. Loacker will be using this powder to produce its products. The cooperation with Brimi, a South Tyrolean milk cooperative, brought about a fresh new wave of synergies.

Migliorina and Collelungo (Tuscany, Italy)

Migliorina and Collelungo are home to two agricultural companies used for the plantation of hazelnuts. The entire surface amounts to 270 hectares.

Developing the Locker Brand.

Corporate policy and management

The Locker brand is the most valuable asset of the Locker Group. It allows us to build long-term ties with our customers, to successfully market our products, to achieve healthy growth and to secure our leading market position. With the right management, the Locker brand guarantees sustainable profitability. We constantly endeavour to continue the success of the past, to make decisions and to act in line with the Locker brand and thereby strengthen it each and every day. In 2006, the company management launched a brand management process that provides the necessary tools. All company and brand management tools were integrated into a mandatory organisational structure.

Mission

We make people all over the world happy with our pure and wholesome natural goodness.

Every person who gets in touch with our brand, should live the best-possible Locker experience. Such an aim demands for a global perspective as we are an international brand. Indeed, the Locker brand creates a universal connection, which we strive to preserve globally and for future generations. No matter whether you are an elderly, a young woman or simply a kid: everyone should be able to feel the difference when they experience an authentic, passionate, natural and friendly Locker moment.

Vision

The Locker brand should touch all people around the world.

We are the leading global brand for high-quality wafer, patisserie and chocolate specialities and a synonym for pure and wholesome natural goodness.

Staying close to our consumers and listening to their needs constantly drives and motivates us in our pursuit of innovation and diversification.

This allows us to meet our responsibilities to people and to nature, all along the value creation chain.

The Genetic Code of the Locker brand

is the success pattern of the brand. It includes all the genetic building blocks that have led the company to success and depicts them in a strict order of cause and effect. This also provided the source for the positioning of the brand. It remains valid in the long term and therefore constitutes the benchmark for all current and future actions.

The Brand Strategy

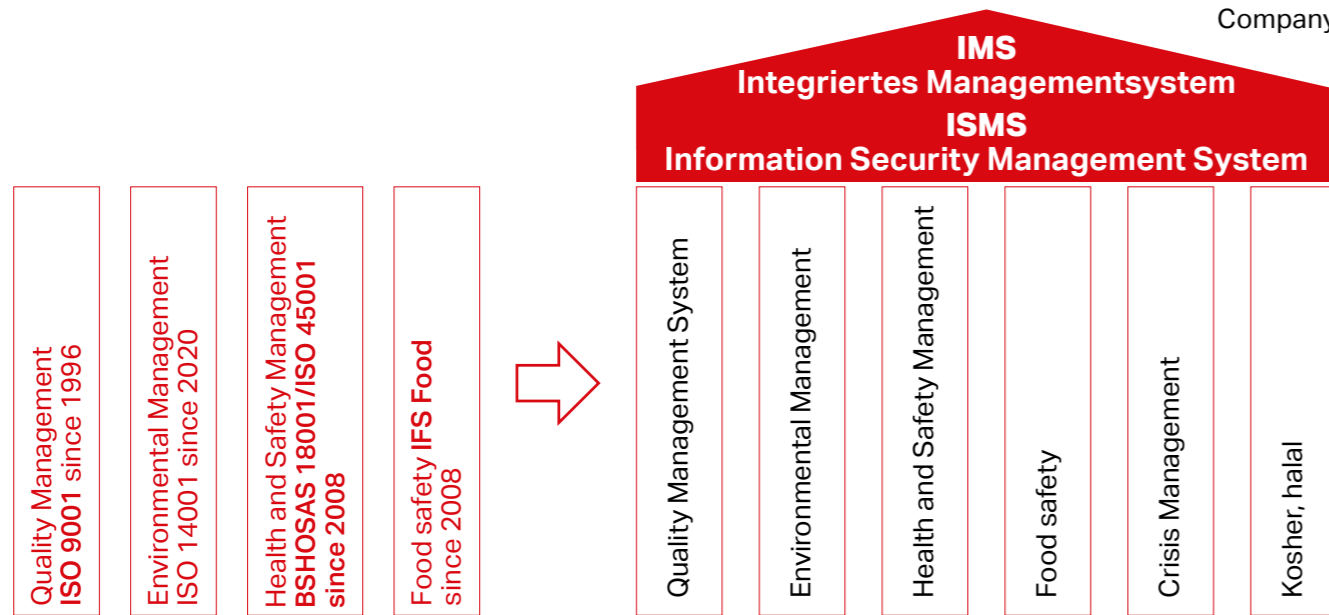

To make the contents of the Genetic Code accessible to all employees for their specific remit, it was complemented by the brand strategy which conveys it in separate paragraphs for every department or service. It serves as a guideline for dealing with the brand in all business processes and thus guarantees a self-similar evolution of the Locker brand.

is to be understood as a guideline in all business processes for daily operations involving the Locker brand. Thereby, all employees have access to rules and guidelines that allow them to manage the shared success. The brand strategy is binding for all employees and is valid for all areas of the company worldwide. The framework provides enough freedom for creativity and individual initiative to flourish.

Functional Strategies and Integrated Management System

Locker operates in a constantly changing environment. The company grew strongly in recent years as a result of its growing international presence and its moves into new areas of business. This requires organisational

and staff adaptations, integrated management and the integration of all business areas within the entire group. In 2011, all management tools were bundled into an Integrated Management System (IMS). The IMS supports holistic company management, takes advantage of synergies and avoids duplication or conflicting regulations. In 2013, as part of a macro-organisation the group was reoriented and a new department for cultural, organisational and staff development was added.

Core Values for the Locker Group

The Core Values for the group of companies outline the main shared concepts

Light, natural taste

The focus of our business operations is to provide our consumers with a light, natural taste experience. The primary objective of our business is to anchor the Locker brand in the hearts and minds of our consumers worldwide as a synonym for unique quality and light, natural taste. It is a continuous challenge to develop the core characteristics of the brand in a self-similar way and to sustainably strengthen the benefits to the customer.

Highest quality standards

In order to achieve and consolidate our position as a leading international brand product, our thoughts and actions are characterised by the highest quality standards. Therefore, it is essential to continuously improve our products and services in line with the expectations of our internal and external customers. We expect all our employees to strive towards improving and developing themselves in accor-

dance with their responsibilities and to optimise their working environment and work processes in a customer-oriented fashion.

Environmental responsibility

We see it as our duty and a daily recurring challenge in our business operations to preserve nature and to be aware of our environmental responsibility. This comes from our deep conviction that an environmentally friendly approach to business will bring benefits in the long term.

Valuable employees

Our employees are crucial to the positive development of our company. Skills and experience, commitment and dedication, enthusiasm and passion are essential in order to meet the high expectations we and others have of us. We encourage professional and personal development and strive to create an environment in which employees can develop and grow,

find meaning, take responsibility and thus deliver a top performance.

Innovation and technological advantage

Intensive research and development, development of our technological expertise and innovation allow us to consistently strengthen our position in the core markets of wafers and premium pastries and move into related market segments while maintaining our high quality standards and the highest possible level of synergy.

Uniqueness

For generations the unique quality of our products has been guaranteed by the use of the best natural raw materials, quality recipes, as well as gentle processing with the latest production technology. Sound natural surroundings are a decisive factor in the selection of our production sites. The water, air and climate found in the mountains are important factors underpinning our quality.

Fairness and long-term cooperation

Our public image is marked by fair competitive behaviour, solid and long-term business relationships with customers and suppliers and good cooperation with public institutions. As an internationally oriented company, we work together with people from different cultures and speaking many languages inside and outside the company. We believe that understanding and respecting the mindset of others, approaching each other openly and honestly

and valuing our interaction with one another are the basis for mutual growth and profitable long-term collaboration..

Independence

Healthy growth, risk diversification, profitability and mostly equity financing guarantee our financial stability and long-term independence as a family business. We always want to decide ourselves how to develop our company further.

The Schlern Mountain

Looking from the main production facility in Unterinn to the opposite mountain side you will immediately notice the Schlern - a legendary massif in the Dolomites. The mountain stands for tradition, naturalness and honesty, and Locker represents these principles with its products. Therefore, the Schlern is depicted as a symbol on all Locker product packaging.

About this Sustainability Report

This is the fourth, up-to-date edition of the Locker Sustainability Report. The information contained therein concerns all the subsidiaries and branches of the Locker Group. The reporting period and most of the indicators cover the years 2009-2019.

Core Option. We also report on other indicators and topics that are highly relevant to Locker's sustainability priorities. The Locker Sustainability Report will be updated every two years.

We followed the guidelines of the Global Reporting Initiative (GRI) as the internationally recognized basis for comparability and transparency. The report is based on the GRI G4 guidelines, which are binding from 2016 onward. The editorial team focused on the content and performance indicators that are most significant for the company. In establishing materiality, we took into consideration the relevance of management for the company and the expectations of our stakeholders. We plan to broaden the indicators to monitor and steer the sustainability performance. The report is in line with the so-called

All references to people use wording that applies to both genders even if

the masculine form is used for easier reading.
